Full document details: BS ISO 20808:2016

National foreword

This British Standard is the UK implementation of ISO 20808:2016.

The UK participation in its preparation was entrusted to Technical Committee RPI/13, Advanced technical ceramics.

A list of organizations represented on this committee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Contents

Page

Foreword ..... **iv**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Significance and use **2**

5 Test materials and specimen preparation **2**
5.1 Materials 2
5.2 Ball specimen 3
5.3 Disc specimen 3

6 Apparatus **3**

7 Testing procedure **4**
7.1 Determination of specimen density 4
7.2 Treatment of specimen before test 4
7.3 Measurement of mass before test 4
7.4 Preparation of wear test 4
7.5 Testing conditions 4
7.6 Measurement of friction force 5
7.7 Measurement of mass after test 5
7.8 Measurement of wear scar on ball specimen 5
7.9 Measurement of wear track on disc specimen 5
7.10 Number of test repeats 5

8 Calculation of test results **6**
8.1 Specific wear rate of ball specimen 6
8.1.1 Specific wear rate according to wear volume 6
8.1.2 Specific wear rate according to mass loss 8
8.2 Specific wear rate of disc specimen 8
8.2.1 Specific wear rate according to wear volume 8
8.2.2 Specific wear rate according to mass loss 9
8.3 Coefficient of friction 9
8.4 Rounding off of numerical values 9

9 Test report **10**

Bibliography **11**

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation on the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see the following URL: www.iso.org/iso/foreword.html.

The committee responsible for this document is ISO/TC 206, *Fine ceramics*.

This second edition cancels and replaces the first edition (ISO 20808:2004), which has been technically revised.
