National foreword

This Published Document is the UK implementation of IEC TR 63099-3:2022.

The UK participation in its preparation was entrusted to Technical Committee W/-, Consumer Products and Services Sector Policy and Strategy Committee.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

This publication is not to be regarded as a British Standard.

CONTENTS

FOREWORD 4
INTRODUCTION 6
1 Scope 7
2 Normative references 7
3 Terms, definitions and abbreviated terms 7
3.1 Terms and definitions 7
3.2 Abbreviated terms 8
4 Practical examples of antenna near-field measurement using optical techniques in terahertz-wave bands 8
4.1 Overview 8
4.2 Non-polarimetric EO frequency down-conversion technique 9
4.3 Synchronous system based on a self-heterodyne technique 10
4.3.1 General 10
4.3.2 Principle and system configuration 10
4.3.3 Example of near-field measurement 10
4.3.4 Near-to-far field transformation results 11
4.4 Asynchronous system based on a phase-noise cancelling technique 13
4.4.1 General 13
4.4.2 Principle and system configuration 13
4.4.3 Example of near-field measurement 14
4.4.4 Near-to-far field transformation results 14
4.5 Comparison between results obtained from synchronous and asynchronous systems 15
Bibliography 17

Figure 1 – Proposed measurement system 8
Figure 2 – Schematic diagram and photograph of EO probe 9
Figure 3 – Principle of the non-polarimetric EO frequency down-conversion technique 9
Figure 4 – Schematic diagram of the synchronous system based on the self-heterodyne technique 10
Figure 5 – Near-field of the terahertz wave (310 GHz) measured by the synchronous system based on the self-heterodyne technique 11
Figure 6 – Measured rectangular-type horn antenna and EO probe 11
Figure 7 – Far-field pattern calculated from the near-field measured by the synchronous system 12
Figure 8 – Far-field pattern in the E-plane and H-plane 12
Figure 9 – Schematic diagram of the asynchronous system based on the phase noise cancelling technique 14
Figure 10 – Near-field pattern measured using the asynchronous system 14
Figure 11 – Far-field pattern calculated from the near-field measured by the asynchronous system 15
Figure 12 – Far-field pattern in the E-plane and H-plane 15
Figure 13 – Far-field pattern calculated from the near-field measured by the synchronous system (a) and asynchronous system (b) 15
Figure 14 – Far-field pattern calculated from the near-field measured by the asynchronous system 16

INTERNATIONAL ELECTROTECHNICAL COMMISSION

TRANSMITTING AND RECEIVING EQUIPMENT FOR RADIOCOMMUNICATION – RADIO-OVER-FIBRE TECHNOLOGIES FOR ELECTROMAGNETIC-FIELD MEASUREMENT –

Part 3: Antenna near-field pattern measurement using optical techniques in terahertz-wave bands

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

IEC TR 63099-3 has been prepared by of IEC technical committee 103: Transmitting and receiving equipment for radiocommunication. It is a Technical Report.

The text of this Technical Report is based on the following documents:

Draft	Report on voting
103/207/DTR	103/224/RVDTR

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this Technical Report is English.

Full document details: PD IEC TR 63099-3:2022

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 63099 series, published under the general title *Transmitting and receiving equipment for radiocommunication – Radio-over-fibre technologies for electromagnetic-field measurement*, can be found on the IEC website.

Future documents in this series will carry the new general title as cited above. Titles of existing documents in this series will be updated at the time of the next edition.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

IMPORTANT – The "colour inside" logo on the cover page of this document indicates that it contains colours which are considered to be useful for the correct understanding of its contents. Users should therefore print this document using a colour printer.
