Introduction

This draft standard is based on national and international discussions. Your comments on this draft are invited and will assist in the preparation of the consequent standard.

For international standards, comments will be reviewed by the relevant UK national committee before sending the consensus UK vote and comments to the international committee, which will then decide appropriate action. If the international standard is approved, it is usual for the text to be published as a British Standard.

For national standards, comments will be reviewed by the relevant UK national committee and the resulting standards published as a British Standard.

UK Vote

Please indicate whether you consider the UK should submit a negative (with supporting technical reasons) or positive vote on this draft. Please indicate if you are aware of any reason why this draft standard should not be published as a British Standard.

Submission of Comments

- **Annotated drafts are not acceptable and will be rejected.**
- All comments should be submitted online at <https://standardsdevelopment.bsigroup.com/>. You will need to register in order to comment.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE**AUTHORITY**

Issue:	Red Book, Issue 1
Date:	September 2021
Location:	Not Applicable

**(WHEN THIS RECOMMENDED PRACTICE IS FINALIZED, IT WILL CONTAIN
THE FOLLOWING STATEMENT OF AUTHORITY:)**

This document has been approved for publication by the Management Council of the Consultative Committee for Space Data Systems (CCSDS) and represents the consensus technical agreement of the participating CCSDS Member Agencies. The procedure for review and authorization of CCSDS documents is detailed in *Organization and Processes for the Consultative Committee for Space Data Systems* (CCSDS A02.1-Y-4), and the record of Agency participation in the authorization of this document can be obtained from the CCSDS Secretariat at the email address below.

This document is published and maintained by:

CCSDS Secretariat
National Aeronautics and Space Administration
Washington, DC, USA
Email: secretariat@mailman.ccsds.org

STATEMENT OF INTENT

(WHEN THIS RECOMMENDED PRACTICE IS FINALIZED, IT WILL CONTAIN THE FOLLOWING STATEMENT OF INTENT:)

The Consultative Committee for Space Data Systems (CCSDS) is an organization officially established by the management of its members. The Committee meets periodically to address data systems problems that are common to all participants, and to formulate sound technical solutions to these problems. Inasmuch as participation in the CCSDS is completely voluntary, the results of Committee actions are termed **Recommendations** and are not in themselves considered binding on any Agency.

CCSDS Recommendations take two forms: **Recommended Standards** that are prescriptive and are the formal vehicles by which CCSDS Agencies create the standards that specify how elements of their space mission support infrastructure shall operate and interoperate with others; and **Recommended Practices** that are more descriptive in nature and are intended to provide general guidance about how to approach a particular problem associated with space mission support. This **Recommended Practice** is issued by, and represents the consensus of, the CCSDS members. Endorsement of this **Recommended Practice** is entirely voluntary and does not imply a commitment by any Agency or organization to implement its recommendations in a prescriptive sense.

No later than five years from its date of issuance, this **Recommended Practice** will be reviewed by the CCSDS to determine whether it should: (1) remain in effect without change; (2) be changed to reflect the impact of new technologies, new requirements, or new directions; or (3) be retired or cancelled.

In those instances when a new version of a **Recommended Practice** is issued, existing CCSDS-related member Practices and implementations are not negated or deemed to be non-CCSDS compatible. It is the responsibility of each member to determine when such Practices or implementations are to be modified. Each member is, however, strongly encouraged to direct planning for its new Practices and implementations towards the later version of the Recommended Practice.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE**FOREWORD**

This document is a technical Recommended Practice for providing guidance for projects about the Additional Information which should be collected in order to ensure that the information created may be exploited into the future.

Through the process of normal evolution, it is expected that expansion, deletion, or modification of this document may occur. This Recommended Practice is therefore subject to CCSDS document management and change control procedures, which are defined in the *Organization and Processes for the Consultative Committee for Space Data Systems* (CCSDS A02.1-Y-4). Current versions of CCSDS documents are maintained at the CCSDS Web site:

<http://www.ccsds.org/>

Questions relating to the contents or status of this document should be sent to the CCSDS Secretariat at the email address indicated on page i.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

At time of publication, the active Member and Observer Agencies of the CCSDS were:

Member Agencies

- Agenzia Spaziale Italiana (ASI)/Italy.
- Canadian Space Agency (CSA)/Canada.
- Centre National d'Etudes Spatiales (CNES)/France.
- China National Space Administration (CNSA)/People's Republic of China.
- Deutsches Zentrum für Luft- und Raumfahrt (DLR)/Germany.
- European Space Agency (ESA)/Europe.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE**PREFACE**

This document is a draft CCSDS Recommended Practice. Its ‘Red Book’ status indicates that the CCSDS believes the document to be technically mature and has released it for formal review by appropriate technical organizations. As such, its technical contents are not stable, and several iterations of it may occur in response to comments received during the review process.

Implementers are cautioned **not** to fabricate any final equipment in accordance with this document’s technical content.

Recipients of this draft are invited to submit, with their comments, notification of any relevant patent rights of which they are aware and to provide supporting documentation.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

1 INTRODUCTION

1.1 PURPOSE AND SCOPE

There is a well-recognized need to capture digital information associated with a great variety of endeavours in virtually all areas of society. However, it is widely recognized that many such endeavours are not able, for one reason or another, to leave a sufficient legacy of information so others can reuse and fully leverage the effort that has gone into the endeavour. The purpose of this Recommended Practice is to provide guidance for projects about the metadata (the term Additional Information is used below because the term ‘metadata’ is too unspecific and its use can cause confusion) that needs to be captured and/or generated and retained in order to ensure that the information created by the project, either as part of its main objectives or as a by-product of achieving those objectives, can be exploited over the short, medium, and long term.

This Recommended Practice deals with the aspects of a project, in particular the terminology used. Many of these terms are already used with various definitions within the target communities for this practice, for example, space, science, life sciences, libraries, records management, and archival communities. It is expected that other communities can easily map this terminology to the terminology used within those communities. The *Reference Model for an Open Archival Information System (OAIS)* provided a starting point and inputs from a variety of other sources were used to arrive at the terms used within this standard.

This Recommended Practice accomplishes the following:

- identifies the Additional Information to be collected or improved at various points;
- forms a basis for the specification of Data Management Plans (DMPs);
- forms a basis for the identification and/or development of additional standards and implementation guides, including those that address particular concerns in more detail.

1.2 CONTEXT

This Recommended Practice extends the approach taken by the widely used *Project Management Book of Knowledge (PMBOK) Guide* (reference [1]) and the related *Data Management Body of Knowledge (DMBOK)* (references [2] and [3]).

The PMBOK defines a project as an endeavour which is temporary, that is, having a beginning and an end, undertaken to create a unique product, service, or result, and focusses on the information and techniques required to manage the project so that it achieves its objectives. The DMBOK focuses on all aspects of data management within such an activity, while noting that ‘*Data, and information created from data, are now widely recognised as enterprise assets*’, and furthermore, ‘*Data has value only when it is actually used, or can be useful in the future*’.

DRAFT CCSDS RECOMMENDED PRACTICE FOR INFORMATION PREPARATION TO ENABLE LONG TERM USE

This document is focussed on the Additional Information that needs to be captured and/or generated and retained in order to ensure that the information created by the project, either as part of its main objectives or as a by-product of achieving those objectives, can be exploited over the short, medium, and long term. It is expected that, by ensuring this Additional Information is collected as fully as possible, projects can significantly improve their information legacy to the benefit of the wider community.

At various times in the project, and for various reasons, data is captured or created. There is Additional Information associated with this data that also needs to be captured. The types of Additional Information are informed by the *Reference Model for an Open Archival Information System (OAIS)* (reference [4]) that provides a conceptual view of long-term information preservation in an archive.

This Recommended Practice fits into the overall context defined by a number of other standards. Some relationships between the documents are illustrated in figure 1-1.

The Additional Information required for the information to be preserved will be collected/created by individuals and teams not necessarily involved with the archive which will undertake the preservation. Therefore, this document is needed as a guide for those individuals and teams so that adequate information is available for those that do use the *Producer-Archive Interface Methodology Abstract Standard (PAIMAS)*, the *Producer-Archive Interface Specification (PAIS)*, OAIS, and Audit and Certification. If insufficient Additional Information is created/collected, then this will limit the ability of any archive to undertake long-term preservation of the information.

Figure 1-1: Relationship between CCSDS Standards

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

OAIS is one of the most widely recognized and applied archival standards available today. An OAIS is an archive, consisting of an organization of people and systems, that has accepted the responsibility to preserve information and make it available for a Designated Community.

PAIMAS (reference [5]) defines a methodology for transferring data from an Information Producer to an Archive based on the four following phases: Preliminary, Formal Definition, Transfer, and Validation. Required activities during each phase are identified.

PAIS (reference [6]) provides the abstract syntax and an XML implementation of descriptions of data to be sent to an archive. These descriptions are negotiated agreements between the data Producer and the Archive and facilitate production of agreed-upon data by the Producer and validation of received data by the Archive. The negotiation is required in order to ensure that the correct level of detail of description is produced. The Recommended Standard includes an abstract syntax and one possible concrete implementation for the packages.

The *Audit and Certification of Trustworthy Digital Repositories* Recommended Practice (reference [7]) provides metrics for use in assessing the trustworthiness of digital repositories or archives.

In addition, there are other CCSDS/ISO standards that may be used to create Representation Information (the *Parameter Value Language (PVL)*, reference [8]; the *Data Description Language EAST Specification*, reference [9]; and the *Data Entity Dictionary Specification Language (DEDSL)*, reference [10]; and also to package information the *XML Formatted Data Unit (XFDU)*, reference [11]). There are many other techniques for creating Additional Information, but these are outside the scope of this document.

1.3 APPLICABILITY

While this Recommended Practice originates in the space community, it is being designed in a generic way and should be applicable to any science domain, such as life sciences, and to the wider library, records management, and archival communities. It is applicable to information created by an individual, in an individual project, or by an organisation as a whole. It is applicable to projects in which the data already exists as well as projects in which data is to be created in the future. It is also applicable to projects in which the associated data is not the main focus of the project.

This document should be of use to funders and information creators, a role which may be played by multiple actors such as researchers or manufacturers, archive managers and end-users. It will be of use by helping to increase the effectiveness of preservation activities and the exploitation of information, and by informing the practices and standards these users define in their communities.

This guidance can form the basis on which plans, including DMPs, can be constructed, updated, and monitored, to achieve the objectives noted above.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

1.4 RATIONALE

Data that is collected or created must have Additional Information associated with it if it is to be independently understandable, usable, and trusted as being authentic. The amount and content of the Additional Information change over time, as hardware, software, the general environment, and users' tacit knowledge change. OAIS uses the terms Representation Information and Preservation Description Information (PDI) for the associated information which is important for preservation. But other types of Additional Information which may help future long-term exploitation are needed. All these must be accumulated over the life of the project. For example, Provenance Information (part of PDI) should originate at data creation and will accumulate over time, recording the things that have happened to the data.

In the case of information created by individual projects, funders are increasingly asking that DMPs accompany any request for project funding. However, these tend not to evolve with the project and are difficult to monitor. This standard encourages the active management of these plans to continue to address the communities' needs and uses for the data. These DMPs can also be captured as part of the Additional Information.

Many project models have been proposed. However, they do not focus on the activities needed at each stage that will help to ensure that the data can be optimally exploited over the long term.

There are a small number of generally applicable groups of activities, within larger project phases in a project where Additional Information should be collected (Collection Groups). These are typically where the responsibility is handed on from one individual or team to another. Each of those individuals or teams has specific knowledge about the information which subsequent individuals or teams may not possess. There is a need to specify the information to be captured within and at the interfaces between each of those Project Phases. Improvements or changes to the Additional Information must be considered as the work proceeds. Therefore, there is a need for guidance as to what Additional Information should be captured or improved through the various Project Phases.

This document should help to enable:

- the Producer to capture and record the relevant information in a timely manner;
- the Archive to be assured that it will receive adequate information to enable it to perform preservation activities and support exploitation (e.g., reuse or secondary use) of the information;
- the user to reuse information more easily;
- the funder/sponsor to be assured that the resources that they contribute to the creation of the information will have suitable pay-back.

DRAFT CCSDS RECOMMENDED PRACTICE FOR INFORMATION PREPARATION TO ENABLE LONG TERM USE

1.5 CONFORMANCE

Conformance to this recommended practice requires that Additional Information is collected as described in sections 4 and 5.

1.6 DOCUMENT STRUCTURE

Section 2 gives an overview of the document concepts and the way in which activities in projects can be grouped. These are expanded in the following sections. The overlapping activities that occur throughout a project or phases in projects are described in more detail in Section 3. Section 4 defines the areas about which information should be collected and identifies the major pieces of information related to eventual reuse and exploitation which need to be collected. Section 5 shows a Framework for the way in which that minimum useful information that should be captured may evolve through the project.

The annexes provide supporting information. Annex B provides more details from PMBOK and DMBOK, from which a number of concepts are drawn. A brief comparison of other ways to break down projects is in annex C. Checklists specific for space projects are given in annex D. Examples of Frameworks, in less detail, are provided for a broader set of domains in annex E. Security considerations are discussed in annex A.

XFDU	XML Formatted Data Unit
XML	Extensible Markup Language

1.7.2 TERMINOLOGY

There are many terms used in this document which need to have well-defined meanings. These terms are defined in this subsection. When first used in the text, they are shown in bold and are capitalized. Subsequent use employs capitalization only. They should eventually be available online at <http://www.sanaregistry.org/r/terms/terms.html>.

Apart from the extra terms below, the definitions provided by the *Reference Model for an Open Archival Information System (OAIS)* (reference [4]) and the other standards described in 1.2 are used; these terms are normally capitalized, following the OAIS convention. It is assumed that the reader has some familiarity with OAIS.

NOTE – For convenience, a number of selected definitions from OAIS are included here:¹

Activity: A distinct, scheduled portion of work performed during the course of a project (from PMBOK).

Additional Information Area: A complete set of concepts, terms, and activities that make up the Additional Information that is needed to support long-term exploitation of data.

¹ At time of publication of this draft Recommended Practice, the OAIS issue from which the definitions originate is a draft.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

Additional Information: The information which should accompany Data to ensure that it can be preserved and exploited. This will include Representation Information and PDI, as defined by OAIS.

Collection Groups: types of Activities in which Additional Information may be collected. The Collection Groups are:

- **Initiating**—justification for creating the data and initial definition of the data project.
- **Planning**—planning for the data creation and encoding.
- **Executing**—creating/collecting/encoding the data. At each point, there may be deviations from the planned results, including instrument effects and unexpected influences.
- **Closing**—completing the data creation/collection/encoding to satisfy the requirements of the project, phase or contractual obligations, and, at the end of the project, turning the information over to the long-term preservation organization.
- **Control**—track, review, and orchestrate the progress and performance of the activities.

Content Information: A set of information that is the original target of preservation or that includes part or all of that information. It is an Information Object composed of its Content Data Object and its Representation Information.

Data: A reinterpretable representation of information in a formalized manner suitable for communication, interpretation, or processing.

Data Management Plan, DMP: A document that describes how Data will be handled throughout the project and what will happen to it when the project ends. There may be several different Data Management Plans, of various scope and timescale, throughout the project.

Data Object: Either a Physical Object or a Digital Object.

Deliverable: Any unique and verifiable product, result, or capability to perform a service that is required to be produced to complete a process, phase, or project (from PMBOK).

Designated Community: An identified group of potential Consumers who should be able to understand a particular set of information in ways exemplified by the Preservation Objectives. The Designated Community may be composed of multiple user communities. A Designated Community is defined by the Archive, and this definition may change over time.

Digital Object: An object composed of a set of bit sequences.

Information Object: A Data Object together with its Representation Information.

Information Package: A logical container composed of optional Information Object(s). Associated with this Information Package is Packaging Information used to delimit and

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

identify the Information Object and optional Package Description information used to facilitate searches for the Information Object.

Information: Any type of knowledge that can be exchanged. In an exchange, it is represented by data.

Long Term: A period of time long enough for there to be concern about the impacts of changing technologies, including support for new media and data formats, and of a changing Designated Community or changes to the Designated Community's Knowledge Base, on the information being held in an OAIS. This period extends into the indefinite future.

Physical Object: An object (such as a moon rock, bio-specimen, or microscope slide) with physically observable properties that represent information that is considered suitable for being adequately documented for preservation, distribution, and independent usage.

Preservation Description Information, PDI: The information, which, along with Representation Information, is necessary for adequate preservation of the Content Data Object and which can be categorized as Provenance Information, Context Information, Reference Information, Fixity Information, and Access Rights Information.

Preservation Objective: A specific achievable aim which can be carried out using the Information Object.

Project Phase: A collection of logically related project activities that culminates in the completion of one or more outputs (from PMBOK).

Project: A temporary endeavour undertaken to create a unique product, service, or result (from PMBOK).

Representation Information: The information that maps a Data Object into more meaningful concepts so that the Data Object may be understood in ways exemplified by Preservation Objectives. It is a type of Information Object.

1.8 NOMENCLATURE

1.8.1 NORMATIVE TEXT

The following conventions apply for the normative specifications in this Recommended Practice:

- a) the words 'shall' and 'must' imply a binding and verifiable specification;
- b) the word 'should' implies an optional, but desirable, specification;
- c) the word 'may' implies an optional specification;
- d) the words 'is', 'are', and 'will' imply statements of fact.

DRAFT CCSDS RECOMMENDED PRACTICE FOR
INFORMATION PREPARATION TO ENABLE LONG TERM USE

NOTE – These conventions do not imply constraints on diction in text that is clearly informative in nature.

1.8.2 INFORMATIVE TEXT

In the normative sections of this document, informative text is set off from the normative specifications either in notes or under one of the following subsection headings:

- Overview;
- Background;
- Rationale;
- Discussion.

1.9 REFERENCES

The following publications contain provisions which, through reference in this text, constitute provisions of this document. At the time of publication, the editions indicated were valid. All publications are subject to revision, and users of this document are encouraged to investigate the possibility of applying the most recent editions of the publications indicated below. The CCSDS Secretariat maintains a register of currently valid CCSDS publications.
