PREFACE

The application of warning lights on roadway operations equipment has been a concern of many agencies and, over the years, has resulted in a variety of applications. As a result, NCHRP Project 13-02 was funded to develop a recommended set of guidelines based on the effects on the responsiveness of motorists to warning lights on roadways. The basic results of the study have been reviewed and the guide has been approved by AASHTO for consideration for use by the member departments.
