**SAE INDUSTRY TECHNOLOGIES CONSORTIA
AEROSPACE STANDARDS AND PART QUALIFICATION PROGRAM
FOREWORD**

On the 1st January 2015 the SAE Industry Technologies Consortia (SAE ITC) acquired the ADS Aerospace Standards, previously known as the Society of British Aerospace Companies (SBAC) Aerospace Standards. The SAE ITC established in 2003 operates as a trade association as part of the SAE International Enterprise, providing a unique framework serving the automotive, aerospace and commercial vehicle sectors. Clients include private companies, government agencies, individuals and trade associations. Building consensus and breakthrough barriers to achieve solutions, and the ways by which those solutions take shape are tailored to each client's individual needs.

The legal obligations and copyright authority of all Aerospace Standards that were issued by the ADS Group Limited are therefore assigned / transferred to the SAE ITC.

These Standards are produced by the SAE ITC with the assistance of, and for the benefit of the Aerospace Industry, as part of a continuous programme of Standardisation for Aerospace application under the control of the Technical Standards Committee (TSC) of the SAE ITC.

SAE ITC Standards are published as part of the series of SAE ITC Aerospace Industry Standards, and where appropriate, additional manufacturing and inspection requirements are issued as Reference Sheets (RS) or Technical Specifications (TS). It is the responsibility of those using or specifying a Standard to ensure the product, process, or manufacturer so used or specified, is appropriate for the task or role in question. The SAE ITC wishes to draw special attention to the fact Technical Specifications (TS) include testing and procedures by which a user or Design Authority can establish whether a particular manufacturer, *prima facie*, has the capability to produce hardware in accordance with the appropriate standards and related specifications.

The SAE ITC, its servants, or representatives accept no responsibility for the continued quality of hardware items produced against the relevant drawings and specifications; this responsibility remains with the user.

Whilst the SAE ITC takes all reasonable care in the preparation of its Standards, neither the SAE ITC, its officers, employees, servants, agents or representatives, shall have any responsibility or liability whatsoever with respect to any act or omission (whether negligent or not) of whatsoever nature, or in connection with the preparation of the Standards or any part thereof. These responsibilities are those of the user or Design Authority. Users of SAE ITC Standards agree that any such liability on the part of the SAE ITC is excluded to the maximum extent permitted by law. SAE ITC Standards may be changed from time to time, and both users and manufacturers of these parts should ensure they are in possession of the latest issue of the Standards and supporting documentation before adoption or the commencement of production.

It is recommended that Technical Specification TS260, Metallic Materials List of Alternative Material Standards, be consulted prior to manufacture of SAE ITC products.

Each Standard is a facsimile or electronic reproduction of a master drawing, and therefore, any outline view scales stated are not necessarily reproduced accurately. A Master Index of all SAE ITC Aerospace Standards is published separately on the SAE ITC website.

All references to Standards include reference to RS and TS publications.

Details of this and any further information can be obtained from the SAE ITC.

SAE Industry Technologies Consortia provides that this standard is published by SAE ITC to advance the state of technical and engineering sciences. The use of this standard is entirely voluntary and this applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user.

Doc issue & issue date	Ref : View, Fig, Para , Table etc	Description & Reason of change	Sponsor / Company
------------------------	-----------------------------------	--------------------------------	-------------------

Issue 2 March 2011	General	The original instigation for this change was only to correct the column title for Recess Torque in soft metric Table 2A from "lbf in" to "N m". However, the decision was then taken to remove the majority of soft metric information from the drg as the drg was ungainly in size & the fixing is primarily of an inch design like the NAS1581 standard it is derived from. This therefore removed said Table 2A & so various other corrections & editorial improvements as listed below were incorporated. Format & notes (where applicable) updated to reflect change of organization name from SBAC to A D S. Refer to Foreword for more details.	Mr A.Olszak BAE Systems & Mr A.D.King Goodrich
	Notes	Notes reordered to agree with set general layout & wording as per drg standard TS66 iss.6 : - Note 2 – ref to soft metric removed. Last sentence now part of new note 8 (finish). Note 3 – ref to BS.8888 removed as ADS does not recognise this draughting standard. Note 4 was 18 – Manufacture & Performance was Procurement Specification. Note 5 was 4. Note 6 was 5. Note 7 was 14. Note 8 was 17 – No code reqd for Titanium clarified as a Natural finish. Note 9 was 21 – metric equivalent added to Surface texture. Note 10 was 16. Note 11 was 19. Note 12 was 6 – relevant procurement spec now stated as NASM1312-20. Note 13 was 7 – ref to intermediate lengths removed as they are already incorporated unlike the similar NAS1581 standard. Note 14 was 8 (first part). Note 15 was 8 (second part) & duplicate note 11 (which accounts for the total no. of notes being reduced from 26 to 24). Note 16 was 10 – Metal max corrected to Raised Metal max. Procurement spec clarified as Performance spec. 15 pounds corrected to 15 lbf. Note 17 was 24. Note 18 was 12. Note 19 was 13. Note 20 was 15. Clarified & now includes mention of missing Oversize Y. Note 21 was 20 – R value clarified as Fatigue stress ratio, not a radius. Note 22 – second sentence about a Phillips license removed as it was also repeated in correct placement of note 23. Note 24 was 25.	
	Standard Bolt views	Top view – Part Mark label leader clarified. Now only one leader line. øW dim clarified with addition of nom ref. Mortorq label clarified. Note 23 was 20. Note 24 was 21 – Missing MIL added to list.
