Estimating and Budgeting Weight and Power Contingencies for Spacecraft Systems

ANSI/AIAA
G-020-1992

American National Standard

Guide for Estimating and Budgeting Weight and Power Contingencies for Spacecraft Systems

Sponsor

American Institute of Aeronautics and Astronautics

Approved April 16, 1992

American National Standards Institute

Abstract

This Guide establishes minimum weight and power contingency allocations for the development and design of all spacecraft, systems, subsystems, components and parts. It provides a detailed description of the stages of development and contains guidelines for the control of weight and power during each stage.

American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to affirm, revise, or withdraw this standard no later than five years from the date of approval. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Guide for estimating and budgeting weight and power contingencies for spacecraft systems / sponsor, American Institute of Aeronautics and Astronautics; approved American National Standards Institute.
