

BSR/AIAA R-024-1993

ADOPTION NOTICE

BSR/AIAA R-024-1993, "Recommended Practice for Space Operations and Support Documentation," was adopted on 15 March 1996 for use by the Department of Defense (DoD). Proposed changes by DoD Activities must be submitted to the DoD Adopting Activity: Det 2, HQ ESC/AV-2, Code AF16, 4027 Col Glenn Hwy, Suite 300, Dayton, OH 45431-1672. DoD activities may obtain copies of this standard from the Standardization Document Order Desk, 700 Robbins Avenue, Building 4D, Philadelphia, PA 19111-5094. The private sector and other Government agencies may purchase copies from the American National Standards Institute, Attention: Customer Service, 11 West 42nd Street, New York, NY 10036, USA.

Adopted by Department of Defense

Abstract

This AIAA Recommended Practice establishes a set of criteria and guidelines to standardize space operations and support documentation including technical manuals, operations manuals, and associated checklists. This document prescribes a standard means to facilitate the sharing and exchange of beneficial information between organizations involved with space operations and support. The recommended practice provides a common interface to simplify space operations planning and reduce the effort needed to learn and deal with new space programs and support organizations.

American National Standard

Approval of an American National Standard requires verification by ANSI that the requirements for due process, consensus, and other criteria have been met by the standards developer.

Consensus is established when, in the judgement of the ANSI Board of Standards Review, substantial agreement has been reached by directly and materially affected interests. Substantial agreement means much more than a simple majority, but not necessarily unanimity. Consensus requires that all views and objections be considered, and that a concerted effort be made toward their resolution.

The use of American National Standards is completely voluntary; their existence does not in any respect preclude anyone, whether he has approved the standards or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standards.

The American National Standards Institute does not develop standards and will in no circumstances give an interpretation of any American National Standard. Moreover, no person shall have the right or authority to issue an interpretation of an American National Standard in the name of the American National Standards Institute. Requests for interpretations should be addressed to the secretariat or sponsor whose name appears on the title page of this standard.

CAUTION NOTICE: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to affirm, revise, or withdraw this standard no later than five years from the date of approval. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.
