Standard for Information and Image Management —

Micrographics—ISO Resolution Test Chart No. 2— Description and Use

Association for Information and Image Management

Abstract

ANSI/ISO 3334-1991 (ANSI/AIIM MS51-1991) is based on ISO 3334-1989 “Micrographics — International Standards Organization (ISO) Resolution Test Chart No. 2 Description and Use.” The standard specifies a method of determining the resolution of a micrographics imaging system.

Foreword

(This foreword is not part of the American National Standard for Information and Image Management—Standard for Micrographics—ISO Resolution Test Chart No. 2 Description and Use, ANSI/ISO 3334-1991 (ANSI/AIIM MS51-1991).

ANSI/ISO 3334-1991 (ANSI/AIIM MS51-1991) is based on ISO 3334: 1989 “Micrographics — ISO Resolution Test Chart No. 2—Description and Use.” Micrographics systems vary in their ability to record fine detail such as alphanumeric characters or closely spaced lines. The method specified in this standard involves the measurement of the ability of a given lens (objective), photosensitive material and processing combination to reproduce an image of fine detail and therefore can be applied to define and control this aspect of imaging quality.

Since microrecording systems can be operated close to the limits of legibility, resolution testing provides a safeguard against the loss of information, although other factors also contribute to the overall quality of the microimage. ANSI/ISO 3334-1991 (ANSI/AIIM MS51-1991) describes a method of testing resolution.

Suggestions for changes or improvements to this standard are welcome and should be sent to the Chair of the AIIM

Standards Board, Association for Information and Image Management, 1100 Wayne Avenue, Suite 1100, Silver Spring, Maryland 20910. The AIIM Standards Board had the following members at the time it approved this standard:

Marilyn Courtot, Chair
 Thomas C. Bagg
 Thomas E. Berney
 Loretta D’Agnolo
 Don Klosterboer
 E. Brien Lewis
 Alan S. Linden
 Wesley J. Micket
