Disclaimer

AMCA uses its best efforts to produce standards for the benefit of the industry and the public in light of available information and accepted industry practices. However, AMCA does not guarantee, certify or assure the safety or performance of any products, components or systems tested, designed, installed or operated in accordance with AMCA standards or that any tests conducted under its standards will be non-hazardous or free from risk.

The test procedures defined in AMCA Standard 260 assume a still air environment. This Standard does not include testing for downdraft within the windband or testing for the effects of crosswinds. Testing to this procedure does not imply products are safe when ventilating toxic airstreams.
