Biological evaluation of medical devices—Part 19: Physico-chemical, morphological, and topographical characterization of materials

Approved 17 October 2005 by
Association for the Advancement of Medical Instrumentation

Registered 20 November 2005 by
American National Standards Institute

Abstract: Provides a compilation of parameters and test methods that can be useful for the identification and evaluation of the physico-chemical, morphological, and topographical (PMT) properties of materials in finished medical devices.

Keywords: physico-chemical, morphological, topographical

Single user license only. Copying, networking, and distribution prohibited.

AAMI Technical Information Report

A technical information report (TIR) is a publication of the Association for the Advancement of Medical Instrumentation (AAMI) Standards Board that addresses a particular aspect of medical technology.

Although the material presented in a TIR may need further evaluation by experts, releasing the information is valuable because the industry and the professions have an immediate need for it.

A TIR differs markedly from a standard or recommended practice, and readers should understand the differences between these documents.

Standards and recommended practices are subject to a formal process of committee approval, public review, and resolution of all comments. This process of consensus is supervised by the AAMI Standards Board and, in the case of American National Standards, by the American National Standards Institute.

A TIR is not subject to the same formal approval process as a standard. However, a TIR is approved for distribution by a technical committee and the AAMI Standards Board.

Another difference is that, although both standards and TIRs are periodically reviewed, a standard must be acted on—reaffirmed, revised, or withdrawn—and the action formally approved usually every five years but at least every 10 years. For a TIR, AAMI consults with a technical committee about five years after the publication date (and periodically thereafter) for guidance on whether the document is still useful—that is, to check that the information is relevant or of historical value. If the information is not useful, the TIR is removed from circulation.

A TIR may be developed because it is more responsive to underlying safety or performance issues than a standard or recommended practice, or because achieving consensus is extremely difficult or unlikely. Unlike a standard, a TIR permits the inclusion of differing viewpoints on technical issues.

CAUTION NOTICE: This AAMI TIR may be revised or withdrawn at any time. Because it addresses a rapidly evolving field or technology, readers are cautioned to ensure that they have also considered information that may be more recent than this document.

All standards, recommended practices, technical information reports, and other types of technical documents developed by AAMI are *voluntary*, and their application is solely within the discretion and professional judgment of the user of the document. Occasionally, voluntary technical documents are adopted by government regulatory agencies or procurement authorities, in which case the adopting agency is responsible for enforcement of its rules and regulations.

Comments on this technical information report are invited and should be sent to AAMI, Attn: Standards Department, 1110 N. Glebe Road, Suite 220, Arlington, VA 22201-4795.

ANSI Technical Report

This AAMI TIR has been registered by the American National Standards Institute as an ANSI Technical Report. Publication of this ANSI Technical Report has been approved by the accredited standards developer (AAMI). This document is registered as a Technical Report series of publications according to the Procedures for the Registration of ANSI Technical Reports. This document is not an American National Standard and the material contained herein is not normative in nature.

Single user license only. Copying, networking, and distribution prohibited.

Glossary of equivalent standards

International standards adopted in the United States may include normative references to other international standards. For each international standard that has been adopted by AAMI (and ANSI), the table below gives the corresponding U.S. designation and level of equivalency to the international standard. (Note: Documents are sorted by international designation.)

Other normatively referenced international standards may be under consideration for U.S. adoption by AAMI; therefore, this list should not be considered exhaustive.

International designation	U.S. designation	Equivalency
IEC 60601-1:2005	ANSI/AAMI ES60601-1:2005	Major technical variations
IEC 60601-1-2:2001 and Amendment 1:2004	ANSI/AAMI/IEC 60601-1-2:2001 and Amendment 1:2004	Identical
IEC 60601-2-04:2002	ANSI/AAMI DF80:2003	Major technical variations
IEC 60601-2-19:1990 and Amendment 1:1996	ANSI/AAMI II36:2004	Major technical variations
IEC 60601-2-20:1990 and Amendment 1:1996	ANSI/AAMI II51:2004	Major technical variations
IEC 60601-2-21:1994 and Amendment 1:1996	ANSI/AAMI/IEC 60601-2-21 and Amendment 1:2000 (consolidated texts)	Identical

Committee representation

Association for the Advancement of Medical Instrumentation

Biological Evaluation of Medical Devices Committee

The adoption of ISO Technical Specification (TS) 10993-19:2006 as an AAMI Technical Information Report was initiated by the AAMI Biological Evaluation of Medical Devices Committee, which also functions as a U.S. Technical Advisory Group to the relevant work in the International Organization for Standardization (ISO). U.S. representatives from the AAMI Material Characterization Working Group (U.S. Sub-TAG for ISO/TC 194/WG 14) played an active part in developing the ISO Technical Specification.

At the time this document was published, the **AAMI Biological Evaluation of Medical Devices Committee** had the following members:

Cochairs:	Donald E. Marlowe
	Peter William Urbanski
Members:	James M. Anderson, MD, PhD, Case Western Reserve University (Independent Expert)
	Roger Dabbah, PhD, US Pharmacopeia Convention Inc
	Lawrence H. Hecker, PhD, Hospira Inc
	John G. Miller, DVM, AAALAC International
	Barry F.J. Page, Barry Page Consulting (Independent Expert)
	Anita Y. Sawyer, Becton Dickinson & Company
	Melvin E. Stratmeyer, PhD, FDA/CDRH
	Paul J. Upman, PhD, NAMSA
	Peter William Urbanski, Medtronic Inc
Alternates:	Raju G. Kammula, DVM PhD, FDA/CDRH
	Donald E. Marlowe, FDA/CDRH
	Sharon J. Northup, PhD, US Pharmacopeia Convention Inc
	Michael F. Wolf, Medtronic Inc

At the time this document was published, the **AAMI Material Characterization Working Group** had the following members:

Cochairs:	Joseph C. Hutter, PhD
	Jim McDivitt
Members:	Paul C. Adlaf, PhD, Northview Biosciences
	David E. Albert, MS,DPM,PhD, NAMSA
	Carolyn Braithwaite, Cobe Sterilization Services Inc
	Kimbrell Darnell, CR Bard
	Leslie Eleanor Frick, Kimberly-Clark Corporation
	Yeong Huang, Cardinal Health (MP&S)
	Joseph C. Hutter, PhD, FDA/CDRH
	Dennis Jenke, PhD, Baxter Healthcare Corporation
	Anita Kore, DVM,PhD, 3M Healthcare
	Jim McDivitt, Johnson & Johnson
	Mark I. Ostler, PhD, Hospira Inc
	Audrey Turley, B.S. RM (NRM), Nelson Laboratories Inc
	Peter William Urbanski, Medtronic Inc
Alternates:	Jon Cammack, PhD, DABT, Baxter Healthcare Corporation
	Anthony J. DeMarinis, BS MS CQA CQM, CR Bard
	John Dooley, PhD,DABT, Johnson & Johnson
	Gloria H. Frost, PhD, Cardinal Health (MP&S)
	Joel R. Gorski, PhD, NAMSA
