

Methods for sampling and testing aggregates

Method 19: Fine particle size distribution in road materials by sieving and decantation

AS 1141.19:2018

This Australian Standard® was prepared by CE-012, Aggregates and Rock for Engineering Purposes. It was approved on behalf of the Council of Standards Australia on 7 December 2018.

This Standard was published on 21 December 2018.

The following are represented on Committee CE-012:

- ARRB (Australian Road Research Board)
- Ash Development Association of Australia
- Australian Geomechanics Society
- Australasian (iron & steel) Slag Association
- Australian Asphalt Pavement Association
- Austroroads
- Cement Concrete & Aggregates Australia - Aggregates
- Cement Concrete & Aggregates Australia - Cement
- Cement Concrete & Aggregates Australia - Concrete
- Engineering & Construction Laboratories Association
- National Association of Testing Authorities Australia
- University of Technology Sydney

This Standard was issued in draft form for comment as DR AS 1141.19:2018.

Preface

This Standard was prepared by the Standards Australia Committee CE-012, Aggregates and Rock for Engineering Purposes, to supersede AS 1141.19—1998.

This edition of the standard has added a safety warning concerning the use of ammonia as a dispersing agent if the working space is not adequately ventilated. Editorial changes have been made to make the method consistent with Standards Australia Standardization Guides.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
1 Scope	1
2 Principle	1
3 Normative references	1
4 Reagents	1
5 Apparatus	2
6 Preparation of samples	2
7 Procedure	3
8 Calculations	5
9 Report	5
Appendix A (normative) Calculation of fine particle size distribution as a percentage of total mass of sample	7
