Preface

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee PK-019, Methods of Test for Pulp and Paper, to supersede AS/NZS 1301.014rp:2002.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this Standard is to provide the pulp and paper industry with a standardised method for classifying wood chips.

The major changes in this edition are the introduction of a definition for card chips and the inclusion of contaminants in the weight of each fraction.
