

AS 2341.27:2022

Methods of testing bitumen and related roadmaking products

Method 27: Determination of sedimentation

AS 2341.27:2022

This Australian Standard ® was prepared by CH-025, Bitumen and Related Products (for Roadmaking). It was approved on behalf of the Council of Standards Australia on 02 November 2022.

This Standard was published on 18 November 2022.

The following are represented on Committee CH-025:

- ARRB
- Australian Airports Association
- Australian Chamber of Commerce and Industry
- Australian Flexible Pavement Association
- Australian Institute of Petroleum
- Austroads
- AustStab
- Department of Transport, Vic
- Engineers Australia
- National Association of Testing Authorities Australia

This Standard was issued in draft form for comment as DR AS 2341.27:2022.

Preface

This Standard was prepared by the Australian members of Joint Standards Australia/Standards New Zealand committee CH-025, Bitumen and Related Products (for Roadmaking), to supersede AS/NZS 2341.27:2008.

After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this document as an Australian Standard rather than an Australian/New Zealand Standard.

The objective of this document is to specify procedures for determining the degree of sedimentation of a bituminous emulsion on standing undisturbed.

The major changes in this edition are as follows:

- (a) The method for determining sedimentation results has been changed so that it is based on residue from evaporation results rather than water content results.
- (b) The apparatus and procedure have been updated to reflect current industry standard apparatus and practice.

Contents

Preface	ii
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Principle	1
5 Apparatus	2
6 Preparation of sample	3
7 Procedure	3
8 Calculation	5
9 Test report	5
10 Precision	5
