

Australian Standard[®]

Ferroalloys—Chemical analysis

**Part 5: Determination of sulfur
content—Infrared method**

This Australian Standard was prepared by Committee MN/6, Ferroalloys. It was approved on behalf of the Council of Standards Australia on 17 November 1997 and published on 5 January 1998.

The following interests are represented on Committee MN/6:

Australasian Institute of Mining and Metallurgy

Australian Foundry Institute

Bureau of Steel Manufacturers of Australia

The Royal Australian Chemical Institute

Steel Reinforcement Institute of Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 96335.
