

Australian Fish Names Standard

This Australian Standard® was prepared by the Fisheries Research and Development Corporation (FRDC) Fish Names Committee, the Standards Reference Body responsible for the technical content of the Australian Fish Names Standard.

It was approved by the FRDC Board on 12 June 2019.

This Standard was published on 24 June 2019.

This Standard includes amendments to Annex A that have been approved by the Fish Names Committee at meetings on 27 November 2015, 22 April 2016, 25 August 2016, 15 March 2017, 26 September 2017, 8 May 2018, 4 September 2018 and 8 May 2019.

The FRDC wishes to acknowledge the participation of the expert individuals who contributed to the development of this Standard through their representation on the Fish Names Committee.

Keeping Standards up-to-date

Australian Standards are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves that they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Standards Development Organisation Standards, drafts, amendments and new projects can be found by visiting www.frdc.com.au, www.seafoodstandards.com.au and www.fishnames.com.au

Foreword

Need for standard fish names

Public and consumer confidence is supremely important to the wellbeing of Australia's \$5 billion seafood industry. Standard fish names:

- Improve management of food safety
- remove confusion
- strengthen consumer confidence
- create market efficiency
- facilitate product recall and traceability
- underpin effective species-based fisheries management, and
- Improve management of food safety.

Australia has over 5000 native species of finfish, and many more crustaceans, molluscs and other invertebrates. Several hundred of these species are important commercially, and many others support recreational activities such as fishing and diving. Australia also imports seafood products consisting of many other fish and invertebrate species from around the world to help satisfy the increasing demand for seafood.

Confusion over fish names has been caused by the numerous species Australia has on offer, a species being known by more than one name, or the same name being used for more than one species. As early as the 1920s, meetings were held in Sydney to discuss fish names as the local and regional variations were becoming apparent.

Extensive work on standardising names used for fish in Australia has been undertaken since the early 1980s by industry, governments, scientists and other stakeholders. Major progress has been made since 1992 as a result of strategic investments by the Fisheries Research and Development Corporation. Seafood Services Australia (SSA) accepted responsibility for standardising fish names in 2001 and continued to maintain this momentum. SSA was accredited as a standards setting body in 2006 and subsequently developed the first version of this standard. SSA ceased operations in 2013.

The Fisheries Research & Development Corporation was accredited as a Standards Development Organisation in 2013 and continued responsibility for the maintenance and ongoing development of this standard.

The Australian Fish Names Standard now includes agreed names for over 600 commercially important domestic and imported species of fish, and over 5,000 other domestic finfish. The process of assigning these agreed names drew on the expertise of several of the world's best fisheries taxonomists and other key stakeholders.

The FRDC has given autonomy to the Fish Names Committee for the development and maintenance of this Standard which is underpinned by rigorous policies and procedures that have been developed by the FRDC.

Purpose of this Standard

Use of standard fish names in Australia, as defined in this Standard, achieves outcomes that are consistent with the aims of industry and governments:

1. Improved monitoring and stock assessment enhance the sustainability of fisheries resources;
2. Increased efficiency in seafood marketing improves consumer confidence and industry profitability;
3. Improved accuracy in trade descriptions enables consumers to make better informed choices when purchasing seafood and reduces the potential for misleading and deceptive conduct;
4. Seafood related public health incidents and food safety risks can be more efficiently managed through improved labelling and species identification;
5. Marketability and consumer acceptability of species are enhanced through the use of standard fish names.

Preparation of this Standard

FRDC is accredited by the Standards Development and Accreditation Committee (SDAC)) of Standards Australia as a Standards Development Organisation. This Standard was prepared by FRDC's Fish Names Committee (FNC) in accordance with requirements set down for developing Australian Standards. The Standard is the result of a consensus among a wide range of stakeholders and an extensive process of consultation with the Fish Names Committee, end users, and the general public.

Fish Names Committee

The membership and operational procedures for the Fish Names Committee (FNC) are specified in the key FRDC policies and procedures;

- FRDC Standards Development Policy that sets the overall policy direction for FRDC in its standards development activities;
- FRDC Standards Development Procedure provides guidance on all standards development activities and applies to all Standards Reference Bodies including the FNC;
- Fish Names Committee Procedures provides guidance to the FNC on additional procedures that relate to the FNC only.

The FNC membership reflects the important role of key stakeholders in the fish names process and ensures that the committee collectively possesses skills and knowledge relating to:

- a) seafood production/harvesting
- b) seafood marketing and trade
- c) promotion and public relations
- d) seafood consumer issues
- e) fish taxonomy and nomenclature
- f) Seafood processing
- g) legislation and processes relevant to the import and export of seafood
- h) government operations and processes, including regulatory issues relevant to seafood
- i) industry leadership
- j) corporate governance including the operations of Boards or committees

The Fisheries Research & Development Corporation

Fisheries Research and Development Corporation (FRDC) is a co-funded partnership between its two stakeholders, the Australian Government and the fishing and aquaculture sectors. It was formed as a statutory corporation on 2nd July 1991, under the provisions of the Primary Industries Research and Development Act 1989 (the PIRD Act 1989) and is responsible to the Minister of Agriculture & Water Resources.

FRDC's role is to plan and invest in fisheries research, development and extension (RD&E) activities in Australia. This includes providing leadership and coordination of the monitoring, evaluating and reporting on RD&E activities, facilitating dissemination, extension and commercialisation. The FRDC achieves this through coordinating government and industry investment, including stakeholders to establish and address RD&E priorities. In addition, the FRDC monitors and evaluates the adoption of RD&E to inform future decisions.

FRDC has a significant responsibility in ensuring, on behalf of the Australian Government, that research is undertaken to assist in the management of the fisheries and aquaculture resource for ongoing sustainability. This means that a significant proportion of funding is directed at research that has a benefit for the three sectors of the fishing industry: commercial (wild catch and aquaculture), recreational and indigenous and also delivers a public good benefit to the Australian community.

Evolution of the FRDC

Since its inception, the FRDC has evolved from being essentially a granting body to one that adds value and strategic focus to RD&E for Australian fishing and Aquaculture. A summary of FRDC's evolution has been prepared and is available for download [PDF].

FRDC's Stakeholders

FRDC works with a diverse and geographically dispersed group of stakeholders and the four main sectors of fishing and aquaculture (aquaculture, commercial fishing, Indigenous fishing and recreational fishing) are not mutually exclusive. For example, Indigenous fishers may participate in customary fishing, conduct aquaculture and commercial fishing, and fish recreationally.

FRDC's stakeholders include:

- federal, state and territory governments, including fisheries and national resource managers
- all fishing and aquaculture sectors
- the Australian community, on whose behalf aquatic natural resources are managed
- seafood consumers
- the research community, including universities, government fisheries organisations, further education organisations (e.g. TAFE) international research organisations and private-sector research providers.

FRDC Revenue Base

Revenue for RD&E investment is based on a co-funding model between the Australian Government and the commercial fishing and aquaculture industries. Funds are collected by the Commonwealth, state and territory governments as part of their fisheries management activities. As stipulated in the PIRD Act, the FRDC's primary revenue source is based on:

- a. the Australian Government providing unmatched funds equivalent to 0.50 per cent of the average gross value of Australian fisheries production (AGVP) for the current year plus the two preceding years,
- b. fishers and aquaculturists providing contributions via government, and
- c. the Australian Government matches this amount up to a maximum of 0.25 per cent of AGVP.

Reporting

In addition to the requirements of the PIRD Act, the FRDC reports to its prescribed representative organisations and is subject to accountability and reporting obligations set out in the Public Governance, Performance and Accountability Act 2013. The FRDC produces an Annual Report for the Commonwealth Parliament and its stakeholders these are available for download from www.frdc.com.au.

1. Scope and Application

1.1 Scope

This Standard defines standard fish names for use in Australia and specifies when standard fish names are to be used. Annex A lists the approved standard fish names and forms part of this Standard.

1.2 Application

This Standard provides guidance on complying with requirements for the use of standard fish names in Australia, and is intended for use by people and businesses involved with fish or seafood in Australia.

2. Interpretative Guidelines

2.1 Compliance with this Standard

Requirements designated by the words 'shall' or 'shall not' are mandatory for organizations seeking to achieve compliance with this Standard.

Requirements designated by the words 'should' or 'should not' are recommended, but are not mandatory to achieve compliance with this Standard.

2.2 Abbreviations, definitions and terms

2.2.1 Application

For the purpose of this Standard, if there is conflict between the definitions in this document and those in other relevant standards or documents, the definitions herein take precedence.

2.2.2 Abbreviations

Abbreviation	Full Description
AFNS	Australian Fish Names Standard
FNC	Fish Names Committee
FRDC	Fisheries Research and Development Corporation
SFN	Standard Fish Name

2.2.3 Terms and definitions

Terms	Definition
annex	an annex to this document is an integral part of the Standard
attachments	an attachment to this document is for information and guidance only.
CAAB Code	(Codes for Australian Aquatic Biota) consists of eight digits and each species is assigned a unique CAAB Code. This number is unique to Australia.
fish	any aquatic vertebrate or invertebrate (excluding mammals and amphibians) in any form, including whole fish, or part thereof, in raw or cooked form, or as a fish product
obsolete name	a fish name (other than the current standard fish name) that has been used to describe a species of fish in a commercial setting
scientific name	the unique scientific name for a fish determined as per international convention and consisting of a genus name and a species name - the scientific names used in this Standard are the scientific names used in CSIRO's CAAB Database or as otherwise advised by CSIRO Marine and Atmospheric Research or another competent authority.
standard fish name	the standard fish name for a species of fish recorded in this standard. A Standard Fish Name (SFN) may cover a single species, or all species in a particular scientific family or group of fish.
taxonomic group name	an animal or plant's taxonomic group name as per international convention. The taxonomic group names used in this standard are those advised by CSIRO Marine and Atmospheric Research, or another competent authority
authority	The author associated with the scientific name Where an authority is in brackets, it indicates that the species is no longer in the genus where it was when originally described, for example <i>Pteria penguin</i> (Röding, 1798) indicates that when Röding originally described this species it was under another name i.e. not in the genus <i>Pteria</i> indicating a history of synonyms.

2.3 Footnotes

Footnotes are for information and guidance in interpretation.

3. References

3.1 Application and format

- a) If this Standard refers to another document, the other document is a referenced document.
- b) Where the edition (or version) of the referenced document is uniquely identified, then that edition (or version) applies.
- c) Where the edition (or version) of the referenced document is not uniquely identified, then the applicable edition (or version) is that which is current at the date upon which the document is published.

3.2 Referenced documents

- I. Standards Development Policy sets the overall policy direction for FRDC in its standards development activities;
- II. BP 21 Procedure - Standards Development provides guidance on all standards development activities and applies to all standards development committees (SDC's);
- III. BP 33 Fish Names Committee Procedures provides additional FNC specific guidance on the operations of the FNC.

4. Requirements for using Standard Fish Names

4.1 Use of Standard Fish Names

4.1.1 When fish are sold or traded to consumers

Fish sold to consumers (e.g., retail sales and restaurants) shall be identified at the point of sale by the Standard Fish Name (SFN) specified for that species in Annex A of this Standard and may also be identified by its scientific name.

4.1.2 When fish are sold or traded other than directly to consumers

Fish sold other than directly to consumers (e.g., wholesale, export, import) shall be identified by either the SFN or scientific name for that species.

4.1.3 Communication of Fish Names

In publications by scientists, recreational fishers, chefs, media, teachers, fisheries managers, and others; fish shall be identified by either their SFN or the scientific name for that species.

4.1.4 Standard Fish Names - Scope and Priority

A Standard Fish Name (SFN) may cover a single species, or all species in a particular scientific family or group of fish.

Fish should be identified by the SFN for that particular species only. However, the SFN for the scientific group or family to which a fish belongs may be used if:

- the fish does not have a SFN for that particular species, or
- the fish is in a batch¹ of different species of fish, all of which are from the same scientific group or family, AND
- using the SFN for the scientific group or family to which a fish belongs, does not mislead, misrepresent or confuse the identification of the fish.

¹ Example: a batch of fish consisting of Dusky Flathead and Tiger Flathead may be identified by the SFN Flathead, which covers all species in the Flathead family.

In any instance where a group name is used the group name may be shown capitalised² in order to indicate that it is a group name.

Some group names listed in this standard display a pluralisation in brackets. When displaying these group names the pluralised form is optional³.

4.2 Use of other fish names

4.2.1 When other fish names may be used

When a SFN is required to be used under this Standard, species of fish that do not have a SFN specified in Annex A may, subject to 4.2.2, be identified by a name that is commonly used for that species in Australia or overseas.

4.2.2 Notification of use of other fish names

A person or business using another fish name (as per 4.2.1) shall notify the FNC through FRDC of that use within 30 days. FRDC will include all such notifications received in accordance with this subsection on the agenda of the next FNC meeting.

The FNC may:

- a) initiate a proposal for a SFN to be assigned for that species, or
- b) require the person or business using the other name to submit an application for a SFN to be assigned for that species of fish

4.2.3 Display of obsolete fish names

A person or business may display of an obsolete fish name on their point of sale labels only if:

- a) the correct standard fish name is displayed in a more prominent position and larger text than, and above the obsolete name, and
- b) the obsolete name is qualified by the use of brackets. A qualifying statement e.g. “formerly sold here as” may also be added in the brackets.

2 Example: a batch of unsorted fish from the family Platycephalidae could be sold with the label displaying Flathead as the applicable group name or could also be shown as FLATHEAD to indicate use of a group name rather than an individual species SFN

3 Example: a batch of fish from the genus Emmelichthys could be sold using a label displaying any of the following: Redbait, Redbaits, Redbait(s), REDBAIT, REDBAITS or REDBAIT(S).
