## Preface

This Standard was prepared by the Standards Australia Committee FT-024, Food Products.

The objective of this document is to specify a reference method for the determination of the titratable acidity of all types of dried milk.

A list of all parts in the ISO 6091 series can be found in the [Standards Australia online catalogue](#).

This document is an adoption with national modifications and has been reproduced from ISO 6091:2010, *Dried milk — Determination of titratable acidity (Reference method)*. The modifications are additional requirements and are set out in Appendix ZZ which has been added at the end of the source text.

Appendix ZZ lists the modifications to ISO 6091:2010, for the application of this document in Australia.

As this document has been reproduced from an International document, the following apply:

- (a) In the source text “this International Standard” should read “this document”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
