

Australian Standard™

## Radio interference test on high-voltage insulators

This Australian Standard was prepared by Committee EL-010, Overhead Lines. It was approved on behalf of the Council of Standards Australia on 21 April 2005. This Standard was published on 18 May 2005.

---

The following are represented on Committee EL-010:

Australasian Railway Association  
Australian Chamber of Commerce and Industry  
Australian Electrical and Electronic Manufacturers Association  
Australian Porcelain Insulators Association  
Electricity Engineers Association (New Zealand)  
Energy Networks Association

---

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Web Shop at [www.standards.com.au](http://www.standards.com.au) and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Global Standard*, has a full listing of revisions and amendments published each month.

Australian Standards™ and other products and services developed by Standards Australia are published and distributed under contract by SAI Global, which operates the Standards Web Shop.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to the Chief Executive, Standards Australia, GPO Box 5420, Sydney, NSW 2001.

---

*This Standard was issued in draft form for comment as DR 05021.*

**Radio interference test on high-voltage insulators**

---

**RECONFIRMATION NOTICE**

Technical Committee EL-010 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 18 November 2015.

The following are represented on Technical Committee EL-010:

Australian Industry Group  
Electricity Engineers Association (New Zealand)  
Energy Networks Association

## PREFACE

This Standard was prepared by the Australian members of the Joint Standards Australia/Standards New Zealand Committee EL-010, Overhead Lines. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian, rather than an Australian/New Zealand Standard.

The objective of this Standard is to specify radio interference tests on high-voltage insulators.

This Standard is identical with, and has been reproduced from IEC 60437, Ed. 2.0 (1997), *Radio interference test on high-voltage insulators*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this international standard’ should read ‘this Australian Standard’.
- (c) A full point should be substituted for a comma when referring to a decimal marker.
- (d) Any French text on figures should be ignored.

## CONTENTS

|                                                         | <i>Page</i> |
|---------------------------------------------------------|-------------|
| 1 Scope .....                                           | 1           |
| 2 Normative references .....                            | 1           |
| 3 Definitions .....                                     | 2           |
| 4 Measurement frequency .....                           | 2           |
| 5 Radio noise limits and test voltage .....             | 2           |
| 6 Measuring instruments .....                           | 3           |
| 6.1 Standard CISPR measuring apparatus .....            | 3           |
| 6.2 Other measuring apparatus .....                     | 3           |
| 7 Measuring circuit .....                               | 3           |
| 8 Requirements for the test voltage .....               | 3           |
| 9 Atmospheric conditions .....                          | 3           |
| 10 Test area .....                                      | 4           |
| 11 Arrangement of insulators for test .....             | 4           |
| 11.1 Mounting of insulators .....                       | 4           |
| 11.2 Condition of insulators before test .....          | 5           |
| 12 Insulators for type test .....                       | 5           |
| 12.1 Number of insulators .....                         | 5           |
| 12.2 String insulator units .....                       | 5           |
| 13 Procedure for type tests .....                       | 5           |
| 13.1 Checking and calibration of the test circuit ..... | 5           |
| 13.2 Voltage application and RI characteristics .....   | 5           |
| 13.3 Acceptance criterion .....                         | 6           |
| 14 Procedure for sample tests .....                     | 6           |
| 14.1 Insulators subject to sample tests .....           | 6           |
| 14.2 Number of samples .....                            | 6           |
| 14.3 Mounting arrangement .....                         | 6           |
| 14.4 Test procedure .....                               | 6           |
| 14.5 Acceptance criterion .....                         | 6           |
| 15 Test report .....                                    | 7           |
