Preface

This Standard was prepared by the Standards Australia Committee ME-063, Earthmoving Equipment.

The objective of this document is to specify the meters used to measure the amount of time an earth-moving machine has been operated.

It is applicable to earth-moving machinery as defined in AS ISO 6165:2023 but does not mandate the use of hour meters on any earth-moving machine.

This document is identical with, and has been reproduced from, ISO 12511:1997, *Earth-moving machinery — Hour meters* and its *Amendment No. 1 (2021)* which has been added at the end of the source text.

As this document has been reproduced from an International document, the following apply:

- (a) In the source text “this International Standard” should read “this document”.
- (b) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
1 Scope	1
2 Normative reference	1
3 Definitions	1
4 General requirements	1
Amendment 1	3
