Preface

This Standard was prepared by the Standards Australia Committee ME-026, Industrial Trucks, to supersede AS ISO 22915.21:2015.

The objective of this document is to specify the tests for verifying the stability of order picking trucks with an elevating operator position, as defined in AS ISO 5053.1, where the operator's position can be raised to an elevation above 1 200 mm.

This document is applicable to industrial trucks fitted with fork arms, platforms and/or integrated attachments under normal operating conditions.

This document is not applicable to trucks fitted with a load carrier that can be shifted laterally or pivoted out of the truck's longitudinal centre plane.

This document is identical with, and has been reproduced from, ISO 22915-21:2019, *Industrial trucks — Verification of stability — Part 21: Order-picking trucks with operator position elevating above 1 200 mm*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Test conditions	2
4.1 General	2
4.2 Position of the truck on the tilt table	2
4.2.1 Load and drive/steer axles	2
4.2.2 Tests 1	2
4.2.3 Tests 2, 3, 4 and 5	2
4.3 Lift height	3
5 Verification of stability	3
Bibliography	8
