Preface

This Standard was prepared by the Standards Australia Committee CS-101, Sports and recreational facilities and equipment.

The objective of this document is to give the specifications for impact attenuation testing equipment used to evaluate the impact performance characteristics of playground surfacing. The specifications are aimed at ensuring that developers and manufacturers of such instruments meet minimum performance characteristics to allow repeatable, reproducible and accurate results.

This document does not specify a test method.

This document is identical with, and has been reproduced from, ISO 24667:2022, *Sports and recreational facilities — Impact surfacing testing device*.

As this document has been reproduced from an International document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Apparatus	1
4.1 Missile (headform)	1
4.2 Accelerometer	2
4.3 Data acquisition system	2
4.3.1 General	2
4.3.2 Channels	2
5 Calculation and processing	3
6 Periodic calibration	3
6.1 General	3
6.2 Accelerometer	3
6.3 Data acquisition system	3
6.4 Reference pad	4
6.5 Missile profile	5
6.6 Calibration report	5
Bibliography	6
