

AS ISO/ASTM 52903.2:2023
ISO/ASTM 52903-2:2020

Additive manufacturing — Material extrusion-based additive manufacturing of plastic materials

Part 2: Process equipment

AS ISO/ASTM 52903.2:2023

This Australian Standard ® was prepared by MB-028, Additive Manufacturing. It was approved on behalf of the Council of Standards Australia on 02 May 2023.

This Standard was published on 19 May 2023.

The following are represented on Committee MB-028:

- Australian Automotive Aftermarket Association
- Australian Ceramic Society
- Australian Manufacturing Technology Institute
- Austroads
- Charles Darwin University
- CNC Design
- Engineers Australia
- Materials Australia
- Metro North Health Hospital and Health Service, QLD
- NSW Government
- RMIT University
- University of Technology Sydney
- University of Wollongong
- Weld Australia

This Standard was issued in draft form for comment as DR AS ISO/ASTM 52903.2:2022.

Preface

This Standard was prepared by the Standards Australia Committee MB-028, Additive Manufacturing.

The objective of this document is to specify requirements for assuring component integrity for plastic parts created using material extrusion based additive manufacturing processes. It relates to the process, equipment and operational parameters. Processes include all material extrusion based additive manufacturing processes.

This document is intended for use by AM users and customers procuring such parts.

This document is identical with, and has been reproduced from, ISO/ASTM 52903-2:2020, *Additive manufacturing — Material extrusion-based additive manufacturing of plastic materials — Part 2: Process equipment*.

As this document has been reproduced from an international document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Process specification	1
4.1 General	1
4.2 Class I	1
4.3 Class II	2
4.4 Class III	2
5 Materials	2
6 Fabrication of test specimens	2
6.1 General	2
6.2 Direction-independent properties	2
6.3 Non-mechanical direction-dependent properties	2
6.4 Mechanical direction-dependent properties	2
6.4.1 All mechanical property testing except tension testing	2
6.4.2 Tension testing	3
7 Responsibility for quality assurance (inspection and test)	3
8 Tolerances and surface roughness	3
9 Material processing	3
9.1 Maintenance	3
9.2 Raw material	3
9.3 Process parameters	4
9.4 Production runs	4
9.5 Post processing	4
10 Qualification	4
10.1 Additive manufacturing equipment qualification	4
10.2 Build qualification	5
10.3 Additive manufacturing equipment requalification	5
11 Report	5
Bibliography	6
