

Australian/New Zealand Standard™

Methods of test for pulp and paper

Method 430: Liner adhesion of corrugated board

AS/NZS 1301.430:2019

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee PK-019, Methods of Test for Pulp and Paper. It was approved on behalf of the Council of Standards Australia on 25 September 2019 and by the New Zealand Standards Approval Board on 4 September 2019.

This Standard was published on 11 October 2019.

The following are represented on Committee PK-019:

Appita
Monash University
New Zealand Paper Forum
Scion

This Standard was issued in draft form for comment as DR AS/NZS 1301.430:2019.

Preface

This Standard was prepared by the joint Standards Australia/Standards New Zealand Committee PK-019, Methods of Test for Pulp and Paper, to supersede AS 1301.430s:2004, *Methods of test for pulp and paper, Method 430s: Liner adhesion of corrugated board*.

The objective of this Standard is to set out a method to determine the liner adhesion of corrugated board.

The major changes in this edition are as follows:

- (a) The number of pins in the holder has not been specified, only a minimum number.
- (b) Changes have been made to the test piece length.
- (c) The location of pins determines which liner or corrugating medium glue lines will fail under load.

This method is similar in principle to Tappi T 821 and FEFCO Method No. 11.

Contents

Preface	ii
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Apparatus	2
4.1 Motor driven crush testing machine	2
4.2 Test piece cutter	2
4.3 Test piece holder	2
5 Preparation of test pieces	3
5.1 Conditioning of sample	3
5.2 Sample preparation	3
5.3 Standard atmosphere	3
6 Procedure	3
6.1 Using the test piece holder	3
6.2 Conducting the adhesion test	4
6.3 Measurements and observations	4
6.4 Calculation	4
7 Test report	4
8 Test accuracy	5
Bibliography	6
