

Interim Australian/New Zealand Standard™

Wool—Measurement of fibre properties

Part 2: Measurement of the fibre length after carding waste of scoured or carbonised wool

AS/NZS 4844.2(Int):2002

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TX-012, Wool. It was approved on behalf of the Council of Standards Australia on 28 June 2002 and on behalf of the Council of Standards New Zealand on 20 June 2002.

This Standard was published on 24 July 2002.

The following are represented on Committee TX-012:

Australian Wool Exchange
Australian Wool Processors Council
Australian Wool Industries Secretariat
CSIRO—Division of Textile and Fibre Technology
Certification Interests (Australia)
Certification Interests (New Zealand)
National Council of New Zealand Wool Interests
National Council of Wool Selling Brokers of Australia
New Zealand Council of Wool Exporters
New Zealand Wool Brokers Association
New Zealand Woolscourers Association
Testing Interests, Australia
Testing Interests, New Zealand
Wool Council of Australia
Wool Research Organisation of New Zealand
Wool Warehouse and Dumping

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

PREFACE

This Interim Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TX-012, Wool, to adopt the Length After Carding (LAC) method developed by the Wool Research Organisation of New Zealand.

This Standard incorporates Amendment No. 1 (January 2005). The changes required by the Amendment are indicated in the text by a marginal bar and amendment number against the clause, note, table, figure or part thereof affected.

This Interim Standard provides to a method of obtaining a sample of card waste and objectively measuring the level of card waste produced after preparation and processing through the LAC length method as described in AS/NZS 4844.1(Int), *Wool—Measurement of fibre properties*, Part 1: *Measurement of the fibre length after carding of scoured or carbonised wool*.

Attention is drawn to the fact that this document is an Interim Australian/New Zealand Standard and should be regarded as a developmental Standard and liable to future alteration.

During the life of the document the Committee will monitor all comment as it is received.

This Interim Standard will have a currency of two years from its date of publication. At the conclusion of that period it will either be superseded by another Standard, confirmed as an Interim Standard in its present form for a further two year period or withdrawn.
