

AS/NZS ISO 18526.4:2021
ISO 18526-4:2020

Australian/New Zealand Standard™

Eye and face protection — Test methods

Method 4: Headforms

AS/NZS ISO 18526.4:2021

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee SF-006, Eye and Face Protection. It was approved on behalf of the Council of Standards Australia on 12 July 2021 and by the New Zealand Standards Approval Board on 04 August 2021.

This Standard was published on 27 August 2021.

The following are represented on Committee SF-006:

- Association of Accredited Certification Bodies
- Australasian Fire and Emergency Service Authorities Council
- Australian and New Zealand Society of Occupational Medicine
- Australian Chamber of Commerce and Industry
- Australian Competition and Consumer Commission
- Australian Dispensing Opticians Association
- Australian Government — Department of Defence
- Australian Industry Group
- Australian Radiation Protection and Nuclear Safety Agency Better Regulation Division (Fair Trading, Safe Work NSW, TestSafe)
- Consumers' Federation of Australia
- Human Factors and Ergonomics Society of Australia
- New Zealand Association of Optometrists
- New Zealand Institute of Safety Management
- Optical Distributors and Manufacturers Association of Australia
- Optometry Australia
- Queensland University of Technology
- Royal Australian and New Zealand College of Ophthalmologists
- University of Canberra
- University of Melbourne
- University of New South Wales
- Weld Australia

This Standard was issued in draft form for comment as DR AS/NZS ISO 18526.4:2021.

Preface

This Test Method was prepared by the Joint Standards Australia/Standards New Zealand Committee SF-006, Eye and Face Protection.

The objective of this document is to specify the dimensions and tolerances of the headforms used for the testing of eye and face protectors.

Additional information is given for:

- (a) anthropometric measurement methods;
- (b) anthropometric data for head and face dimensions; and
- (c) human test panels.

This document is identical with, and has been reproduced from, ISO 18526-4:2020, *Eye and face protection — Test methods — Part 4: Headforms*.

As this document has been reproduced from an International Standard, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received (see www.iso.org/patents).

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT), see www.iso.org/iso/foreword.html.

This document was prepared by ISO/TC 94, *Personal safety — Personal protective equipment*, Subcommittee SC 6, *Eye and face protection*.

A list of all parts in the ISO 18526 series can be found on the ISO website.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html.

Introduction

The family of documents comprised of the ISO 16321 series, the ISO 18526 series and the ISO 18527 series was developed in response to the worldwide stakeholders' demand for minimum requirements and test methods for eye and face protectors traded internationally. ISO 4007 gives the terms and definitions for all the various product types. The test methods are given in the ISO 18526 series, while the requirements for occupational eye and face protectors are given in the ISO 16321 series. Eye protectors for specific sports are mostly dealt with by the ISO 18527 series. A guidance document, ISO 19734, for the selection, use and maintenance of eye and face protectors is under preparation.

The basic anatomical requirements of the users of eye and face protection are to be considered when selecting an appropriate size of protector for comfortable and functional use. This document provides the anthropometric and biomechanical data required to prepare headforms used for the testing of protectors. The headform dimensions (series 1 and 2) are based on measurements of humans by the USA's National Institute of Occupational Safety and Health (NIOSH), which is part of the Centers for Disease Control and Prevention.

This document provides headform dimensions based on measurements of humans. Further information is given in [Annex A](#) and [Annex B](#), which, together with [Figure 3](#), are reproduced with NIOSH's and the authors' permission. [Figures 2](#) and [3](#) show the headforms that are slightly modified to show better eye detail.

NOTES

Australian/New Zealand Standard

Eye and face protection — Test methods

Method 4: Headforms

1 Scope

This document specifies the dimensions and tolerances of the headforms used for the testing of eye and face protectors.

Additional information is given for:

- anthropometric measurement methods;
- anthropometric data for head and face dimensions;
- human test panels.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 4007, *Personal protective equipment — Eye and face protection — Vocabulary*

CSA Z262.6:2014, *Specifications for facially featured headforms*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 4007 apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- ISO Online browsing platform: available at <https://www.iso.org/obp>
- IEC Electropedia: available at <http://www.electropedia.org/>

4 Headforms

4.1 Classification of adult headforms

Six different sizes of headforms are used for testing as given in [Table 1](#).

Table 1 — Classification of headforms for eye and face protectors

Small	Medium	Large
1-S	1-M	1-L
2-S	2-M	2-L

Statistically these six headforms cover approximately 95 % of the population included in this document. [Annex A](#) and [Annex B](#) provide detailed information on the data collection and the human populations that the data is measured from. The information in [Annex A](#) and [Annex B](#) are from References [2] [3] [15] [16].

Examples of the headforms are given in [Figures 1](#) and [2](#). The individual figures are not to the same scale as each other, so for accurate details use the CAD files.
