Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee ME-067, Assistive Technology, to supersede AS 3696.6:1990, *Wheelchairs, Part 6: Determination of maximum speed, acceleration and retardation of electric wheelchairs*.

The objective of this document is to specify test methods for determining the maximum speed of electrically powered wheelchairs, including scooters, intended to carry one person with a maximum nominal speed not exceeding 15 km/h (4 167 m/s) on a level surface.

This document is identical with, and has been reproduced from, ISO 7176-6:2018, *Wheelchairs — Part 6: Determination of maximum speed of electrically powered wheelchairs*.

As this document has been reproduced from an international document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
