

Australian/New Zealand Standard™

**Conformity assessment—Requirements
for bodies certifying products,
processes and services**

AS/NZS ISO/IEC 17065:2013

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee QR-010, Conformity Assessment. It was approved on behalf of the Council of Standards Australia on 10 July 2013 and on behalf of the Council of Standards New Zealand on 14 June 2013.

This Standard was published on 21 August 2013.

The following are represented on Committee QR-010:

Association of Accredited Certification Bodies
Australasian Procurement and Construction Council
Australian Information Industry Association
Certification Interests (Australia)
Consumer Federation of Australia
International Accreditation Forum
International Accreditation New Zealand
Joint Accreditation System of Australia and New Zealand
National Association of Testing Authorities Australia
New Zealand Organisation for Quality

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS ISO/IEC 17065.

Australian/New Zealand Standard™

Conformity assessment—Requirements for bodies certifying products, processes and services

Originated as AS/NZS 3843:1998 and HB 18.65:1998.
AS/NZS 3843:1998 and HB 18.65:1998 revised and
designated AS/NZS ISO/IEC 17065:2013.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee QR-010, Conformity Assessment, to supersede AS/NZS 3843:1998, *Guide 65: General requirements for bodies operating product certification systems* and HB 18.65, *Guidelines for third-party certification and accreditation*, *Guide 65: General requirements for bodies operating product certification systems*.

The objective of this Standard is to provide requirements for the competence, consistent operation and impartiality of third-party conformity assessment bodies which are involved in product, process and service certification. Certification bodies operating to this International Standard need not offer all types of products, processes and services certification.

This Standard is identical with, and has been reproduced from ISO/IEC 17065:2012, *Conformity assessment—Requirements for bodies certifying products, processes and services*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text ‘this International Standard’ should read ‘this Australian/New Zealand Standard’.
- (b) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>

INTRODUCTION

The overall aim of certifying products, processes or services is to give confidence to all interested parties that a product, process or service fulfils specified requirements. The value of certification is the degree of confidence and trust that is established by an impartial and competent demonstration of fulfilment of specified requirements by a third party. Parties that have an interest in certification include, but are not limited to:

- a) the clients of the certification bodies;
- b) the customers of the organizations whose products, processes or services are certified;
- c) governmental authorities;
- d) non-governmental organizations; and
- e) consumers and other members of the public.

Interested parties can expect or require the certification body to meet all the requirements of this International Standard as well as when relevant, those of the certification scheme.

Certification of products, processes or services is a means of providing assurance that they comply with specified requirements in standards and other normative documents. Some product, process or service certification schemes may include initial testing or inspection and assessment of its suppliers' quality management systems, followed by surveillance that takes into account the quality management system and the testing or inspection of samples from the production and the open market. Other schemes rely on initial testing and surveillance testing, while still others comprise type testing only.

This International Standard specifies requirements, the observance of which is intended to ensure that certification bodies operate certification schemes in a competent, consistent and impartial manner, thereby facilitating the recognition of such bodies and the acceptance of certified products, processes and services on a national and international basis and so furthering international trade. This International Standard can be used as a criteria document for accreditation or peer assessment or designation by governmental authorities, scheme owners and others.

The requirements contained in this International Standard are written, above all, to be considered as general criteria for certification bodies operating product, process or service certification schemes; they may have to be amplified when specific industrial or other sectors make use of them, or when particular requirements such as health and safety have to be taken into account. Annex A contains principles relating to certification bodies and certification activities that they provide.

This International Standard does not set requirements for schemes and how they are developed and is not intended to restrict the role or choice of scheme owners, however scheme requirements should not contradict or exclude any of the requirements of this International Standard.

Statements of conformity to the applicable standards or other normative documents can be in the form of certificates and/or marks of conformity. Schemes for certifying particular products or product groups, processes and services to specified standards or other normative documents will, in many cases, require their own explanatory documentation.

While this International Standard is concerned with third parties providing product, process or service certification, many of its provisions may also be useful in first- and second-party product conformity assessment procedures.

In this International Standard, the following verbal forms are used:

- “shall” indicates a requirement;
- “should” indicates a recommendation;
- “may” indicates a permission;
- “can” indicates a possibility or a capability.

Further details can be found in the ISO/IEC Directives, Part 2.

NOTES

AUSTRALIAN/NEW ZEALAND STANDARD

Conformity assessment—Requirements for bodies certifying products, processes and services**1 Scope**

This International Standard contains requirements for the competence, consistent operation and impartiality of product, process and service certification bodies. Certification bodies operating to this International Standard need not offer all types of products, processes and services certification. Certification of products, processes and services is a third-party conformity assessment activity (see ISO/IEC 17000:2004, definition 5.5).

In this International Standard, the term “product” can be read as “process” or “service”, except in those instances where separate provisions are stated for “processes” or “services” (see Annex B).

2 Normative references

The following referenced documents are indispensable for the application of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO/IEC 17000, *Conformity assessment — Vocabulary and general principles*

ISO/IEC 17020, *Conformity assessment — Requirements for the operation of various types of bodies performing inspection*

ISO/IEC 17021, *Conformity assessment — Requirements for bodies providing audit and certification of management systems*

ISO/IEC 17025, *General requirements for the competence of testing and calibration laboratories*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO/IEC 17000 and the following apply.

3.1**client**

organization or person responsible to a certification body for ensuring that **certification requirements** (3.7), including **product requirements** (3.8), are fulfilled

NOTE Whenever the term “client” is used in this International Standard, it applies to both the “applicant” and the “client”, unless otherwise specified.

3.2**consultancy**

participation in

- a) the designing, manufacturing, installing, maintaining or distributing of a certified product or a product to be certified, or

- b) the designing, implementing, operating or maintaining of a certified process or a process to be certified, or
- c) the designing, implementing, providing or maintaining of a certified service or a service to be certified

NOTE In this International Standard, the term “consultancy” is used in relation to activities of certification bodies, personnel of certification bodies and organizations related or linked to certification bodies.

3.3 evaluation

combination of the selection and determination functions of conformity assessment activities

NOTE The selection and determination functions are specified in ISO/IEC 17000:2004, Clauses A.2 and A.3.

3.4 product result of a process

NOTE 1 Four generic product categories are noted in ISO 9000:2005:

- services (e.g. transport) (see definition in 3.6);
- software (e.g. computer program, dictionary);
- hardware (e.g. engine, mechanical part);
- processed materials (e.g. lubricant).

Many products comprise elements belonging to different generic product categories. Whether the product is then called service, software, hardware or processed material depends on the dominant element.

NOTE 2 Products include results of natural processes, such as growth of plants and formation of other natural resources.

NOTE 3 Adapted from ISO/IEC 17000:2004, definition 3.3.

3.5 process

set of interrelated or interacting activities which transforms inputs into outputs

EXAMPLES Welding engineering processes; heat treatment processes; manufacturing processes requiring confirmation of process capability (e.g. operating or producing product within specified tolerances); food production processes; plant growth processes.

NOTE Adapted from ISO 9000:2005, definition 3.4.1.

3.6 service

result of at least one activity necessarily performed at the interface between the supplier and the customer, which is generally intangible

NOTE 1 Provision of a service can involve, for example, the following:

- an activity performed on a customer-supplied tangible product (e.g. automobile to be repaired);
- an activity performed on a customer-supplied intangible product (e.g. the income statement needed to prepare a tax return);
- the delivery of an intangible product (e.g. the delivery of information in the context of knowledge transmission);
- the creation of ambience for the customer (e.g. in hotels and restaurants).

NOTE 2 Adapted from ISO 9000:2005, definition 3.4.2.

3.7

certification requirement

specified requirement, including **product requirements** (3.8), that is fulfilled by the **client** (3.1) as a condition of establishing or maintaining certification

NOTE Certification requirements include requirements imposed on the client by the certification body [usually via the certification agreement (see 4.1.2)] to meet this International Standard, and can also include requirements imposed on the client by the certification scheme. “Certification requirements”, as used in this International Standard, do not include requirements imposed on the certification body by the certification scheme.

EXAMPLE The following are certification requirements that are not product requirements:

- completing the certification agreement;
- paying fees;
- providing information about changes to the certified product;
- providing access to certified products for surveillance activities.

3.8

product requirement

requirement that relates directly to a product, specified in standards or in other normative documents identified by the certification scheme

NOTE Product requirements can be specified in normative documents such as regulations, standards and technical specifications.

3.9

certification scheme

certification system related to specified products, to which the same specified requirements, specific rules and procedures apply

NOTE 1 Adapted from ISO/IEC 17000:2004, definition 2.8.

NOTE 2 A “certification system” is a “conformity assessment system”, which is defined in ISO/IEC 17000:2004, definition 2.7.

NOTE 3 The rules, procedures and management for implementing product, process and service certification are stipulated by the certification scheme.

NOTE 4 General guidance for the development of schemes is given in ISO/IEC 17067, in combination with ISO/IEC Guide 28 and ISO/IEC Guide 53.

3.10

scope of certification

identification of

- the product(s), process(es) or service(s) for which the certification is granted,
- the applicable certification scheme, and
- the standard(s) and other normative document(s), including their date of publication, to which it is judged that the product(s), process(es) or service(s) comply

3.11

scheme owner

person or organization responsible for developing and maintaining a specific **certification scheme** (3.9)

NOTE The scheme owner can be the certification body itself, a governmental authority, a trade association, a group of certification bodies or others.

3.12**certification body**

third-party conformity assessment body operating certification schemes

NOTE A certification body can be non-governmental or governmental (with or without regulatory authority).

3.13**impartiality**

presence of objectivity

NOTE 1 Objectivity is understood to mean that conflicts of interest do not exist, or are resolved so as not to adversely influence the activities of the body.

NOTE 2 Other terms that are useful in conveying the element of impartiality are independence, freedom from conflicts of interest, freedom from bias, freedom from prejudice, neutrality, fairness, open-mindedness, even-handedness, detachment and balance.

4 General requirements**4.1 Legal and contractual matters****4.1.1 Legal responsibility**

The certification body shall be a legal entity, or a defined part of a legal entity, such that the legal entity can be held legally responsible for all its certification activities.

NOTE A governmental certification body is deemed to be a legal entity on the basis of its governmental status.

4.1.2 Certification agreement

4.1.2.1 The certification body shall have a legally enforceable agreement for the provision of certification activities to its clients. Certification agreements shall take into account the responsibilities of the certification body and its clients.

4.1.2.2 The certification body shall ensure its certification agreement requires that the client comply at least, with the following:

- a) the client always fulfils the certification requirements (see 3.7), including implementing appropriate changes when they are communicated by the certification body (see 7.10);
- b) if the certification applies to ongoing production, the certified product continues to fulfil the product requirements (see 3.8);
- c) the client makes all necessary arrangements for
 - 1) the conduct of the evaluation (see 3.3) and surveillance (if required), including provision for examining documentation and records, and access to the relevant equipment, location(s), area(s), personnel, and client's subcontractors;
 - 2) investigation of complaints;
 - 3) the participation of observers, if applicable;
- d) the client makes claims regarding certification consistent with the scope of certification (see 3.10);

- e) the client does not use its product certification in such a manner as to bring the certification body into disrepute and does not make any statement regarding its product certification that the certification body may consider misleading or unauthorized;
- f) upon suspension, withdrawal, or termination of certification, the client discontinues its use of all advertising matter that contains any reference thereto and takes action as required by the certification scheme (e.g. the return of certification documents) and takes any other required measure;
- g) if the client provides copies of the certification documents to others, the documents shall be reproduced in their entirety or as specified in the certification scheme;
- h) in making reference to its product certification in communication media such as documents, brochures or advertising, the client complies with the requirements of the certification body or as specified by the certification scheme;
- i) the client complies with any requirements that may be prescribed in the certification scheme relating to the use of marks of conformity, and on information related to the product;

NOTE See also ISO/IEC 17030, ISO/IEC Guide 23 and ISO Guide 27.

- j) the client keeps a record of all complaints made known to it relating to compliance with certification requirements and makes these records available to the certification body when requested, and
 - 1) takes appropriate action with respect to such complaints and any deficiencies found in products that affect compliance with the requirements for certification;
 - 2) documents the actions taken;

NOTE Verification of item j) by the certification body can be specified in the certification scheme.

- k) the client informs the certification body, without delay, of changes that may affect its ability to conform with the certification requirements.

NOTE Examples of changes can include the following:

- the legal, commercial, organizational status or ownership,
- organization and management (e.g. key managerial, decision-making or technical staff),
- modifications to the product or the production method,
- contact address and production sites,
- major changes to the quality management system.

4.1.3 Use of license, certificates and marks of conformity

4.1.3.1 The certification body shall exercise the control as specified by the certification scheme over ownership, use and display of licenses, certificates, marks of conformity, and any other mechanisms for indicating a product is certified.

NOTE 1 Guidance on the use of certificates and marks permitted by the certification body can be obtained from ISO/IEC Guide 23.

NOTE 2 ISO/IEC 17030 provides requirements for the use of third-party marks.

4.1.3.2 Incorrect references to the certification scheme, or misleading use of licenses, certificates, marks, or any other mechanism for indicating a product is certified, found in documentation or other publicity, shall be dealt with by suitable action.

NOTE Such actions are addressed in ISO Guide 27 and can include corrective actions, withdrawal of certificate, publication of the transgression and, if necessary, legal action.
