AS/NZS ISO/IEC 18598:2021

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee CT-001, Interconnection of Information Technology equipment. It was approved on behalf of the Council of Standards Australia on 19 July 2021 and by the New Zealand Standards Approval Board on 7 July 2021.

This Standard was published on 30 July 2021.

The following are represented on Committee CT-001:

Australian Chamber of Commerce and Industry
Australian Council of Trade Unions (ACTU)
Australian Digital and Telecommunications Industry Association
Australian Industry Group
Australian Information Industry Association
BICSI South Pacific (Australia)
BICSI South Pacific (New Zealand)
Energy Networks Australia
Engineers Australia
KNX National Group
National Electrical and Communications Association
NBN Co
Technology Users Association of New Zealand
Telstra Corporation
TITAB

Additional Interests

VTI Services

This Standard was issued in draft form for comment as DR AS/NZS ISO/IEC 18598:2021.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee CT-001, Interconnection of Information Technology equipment.

The objective of this document is to specify the requirements and recommendations for the attributes of automated infrastructure management (AIM) systems.

This document explains how AIM systems can contribute to operational efficiency and deliver benefits to—

(a) cabling infrastructure and connected device administration;

(b) facilities and IT management processes and systems;

(c) other networked management processes and systems (e.g. intelligent building systems); and

(d) business information systems covering asset tracking and asset management together with event notifications and alerts that assist with physical network security.

This document specifies a framework of requirements and recommendations for data exchange with other systems.

This document is identical with, and has been reproduced from, ISO/IEC 18598:2016, *Information technology – Automated infrastructure management (AIM) systems – Requirements, data exchange and applications*.

As this document has been reproduced from an International Standard, the following applies:

(i) In the source text "this International Standard" should read "this document".

(ii) A full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms "normative" and "informative" are used in Standards to define the application of the appendices or annexes to which they apply. A "normative" appendix or annex is an integral part of a Standard, whereas an "informative" appendix or annex is only for information and guidance.

Foreword

1) ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work. In the field of information technology, ISO and IEC have established a joint technical committee, ISO/IEC JTC 1.

2) The formal decisions or agreements of IEC and ISO on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees and ISO member bodies.

3) IEC, ISO and ISO/IEC publications have the form of recommendations for international use and are accepted by IEC National Committees and ISO member bodies in that sense. While all reasonable efforts are made to ensure that the technical content of IEC, ISO and ISO/IEC publications is accurate, IEC or ISO cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.

4) In order to promote international uniformity, IEC National Committees and ISO member bodies undertake to apply IEC, ISO and ISO/IEC publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any ISO, IEC or ISO/IEC publication and the corresponding national or regional publication should be clearly indicated in the latter.

5) ISO and IEC do not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. ISO or IEC are not responsible for any services carried out by independent certification bodies.

6) All users should ensure that they have the latest edition of this publication.

7) No liability shall attach to IEC or ISO or its directors, employees, servants or agents including individual experts and members of their technical committees and IEC National Committees or ISO member bodies for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication of, use of, or reliance upon, this ISO/IEC publication or any other IEC, ISO or ISO/IEC publications.

8) Attention is drawn to the normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.

9) Attention is drawn to the possibility that some of the elements of this ISO/IEC publication may be the subject of patent rights. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

International Standard ISO/IEC 18598 was prepared by subcommittee 25: Interconnection of information technology equipment, of ISO/IEC joint technical committee 1: Information technology.

This International Standard has been approved by vote of the member bodies, and the voting results may be obtained from the address given on the second title page.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 2.

Introduction

This International Standard is intended for

- premises owners and facility managers,
- suppliers of AIM solutions,
- planners of network infrastructures,
- network operation managers,
- data centre operation managers,
- IT process managers,
- suppliers of management system software,
- software integrators.

This International Standard is one of a number of documents prepared in support of International Standards and Technical Reports produced by ISO/IEC JTC 1/SC 25.

Australian/New Zealand Standard

Information technology — Automated infrastructure management (AIM) systems — Requirements, data exchange and applications

1 Scope

This International Standard specifies the requirements and recommendations for the attributes of automated infrastructure management (AIM) systems.

This International Standard explains how AIM systems can contribute to operational efficiency and deliver benefits to

a) cabling infrastructure and connected device administration,

b) facilities and IT management processes and systems,

c) other networked management processes and systems (e.g. intelligent building systems),

d) business information systems covering asset tracking and asset management together with event notifications and alerts that assist with physical network security.

This International Standard specifies a framework of requirements and recommendations for data exchange with other systems

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

There are no normative references in this document.

3 Terms, definitions and abbreviations

3.1 Terms and definitions

For the purposes of this document, the following terms and definitions apply.

3.1.1
AIM-enabled port
port which is able to automatically detect the insertion and removal of a cord and process that event as part of an automated infrastructure management system

3.1.2
AIM hardware
combination of patch panels and controllers that are designed to automatically detect the insertion or removal of cords, to record connectivity information, and to exchange connectivity information with AIM software

3.1.3
AIM system
integrated hardware and software system that automatically detects the insertion or removal of cords, documents the cabling infrastructure including connected equipment enabling management of the infrastructure and data exchange with other systems

3.1.4
alarm
event of sufficient importance to be highlighted within the AIM system

Documents
Document Sharing Hub

© Standards Australia Limited/Standards New Zealand 2021

Full document details: AS NZS ISO IEC 18598-2021

3.1.5
application programming interface
API
set of commands, functions and protocols that specify how software components should interact

3.1.6
basic connectivity configuration
list of information including, but not restricted to, number and type of ports, number of slots, expansion cards, MAC and IP address

3.1.7
business information system
system that is used to analyse and facilitate strategic and operational activities for an organization

3.1.8
building management system
BMS
computer-based control system installed in a building that controls and monitors mechanical and electrical equipment such as heating, ventilation and air-conditioning (HVAC), power systems and access control systems

3.1.9
cabling connectivity information
combination of connection information automatically detected by AIM and additional cabling infrastructure information from various sources

3.1.10
cabling infrastructure
cables, connecting hardware, panels and other closures, cabinets, frames, racks together with pathways and spaces providing their accommodation

3.1.11
circuit
series of electromagnetically connected components or devices

3.1.12
closure
fixture or fitting of either open or closed construction intended to contain connecting hardware

[SOURCE: ISO/IEC 14763-2:2012, 3.1.11]

3.1.13
command
defined method which either provides data or performs an internal operation within an AIM system based on a request

Note 1 to entry: A command may contain zero or more parameters.

3.1.14
configuration management database
repository of information related to all the components of an information system

3.1.15
connecting hardware
device or combination of devices used to connect cables or cable elements

[SOURCE: ISO/IEC 11801:2002, 3.1.17, modified]

3.1.16
connection information
record of an event generated by the insertion or removal of a connector at an AIM-enabled port

© Standards Australia Limited/Standards New Zealand 2021

AVA Documents Document Sharing Hub

Full document details: AS NZS ISO IEC 18598-2021

3.1.17
cord
cable, cable unit or cable element with a minimum of one termination

[SOURCE: ISO/IEC 11801:2002, 3.1.20]

3.1.18
data
value or set of values that describes information within an AIM system

3.1.19
data exchange
ability of an AIM system and other systems to work together reliably

3.1.20
discoverable equipment
equipment with a network address

Note 1 to entry: Discoverable equipment could be treated as non-discoverable equipment according to end user choice.

3.1.21
end device
equipment that is either the source or the destination of a message on a networked system

3.1.22
event
change in state of an element within the AIM system

3.1.23
information security management system
part of the overall management system, based on a business risk approach, that establishes, implements, operates, monitors, reviews, maintains and improves information security

Note 1 to entry: The management system includes organizational structure, policies, planning activities, responsibilities, practices, procedures, processes and resources.

3.1.24
interoperability
ability for two or more independent systems to exchange data or information

3.1.25
managed network distribution equipment
discoverable network distribution equipment that uses communications protocols such as the simple network management protocol (SNMP) to exchange management information

3.1.26
network distribution equipment
electronic equipment that provides connectivity and supports data exchange between end devices

3.1.27
non-discoverable equipment
equipment without a network address

3.1.28
patch panel
closure designed to be mounted in a cabinet, frame or rack

3.1.29
permissions
set of rules which describe what a user or group of users may access or control within an AIM system

Documents
Document Sharing Hub
© Standards Australia Limited/Standards New Zealand 2021
Full document details: AS NZS ISO IEC 18598-2021

3.1.30
telecommunications infrastructure
cabling infrastructure together with the network distribution equipment, end devices and their accommodation

3.1.31
work order
set of one or more actions that should be performed by a technician or user of the system

3.2 Abbreviations

For the purposes of this document, the following abbreviations apply.

AIM	automated infrastructure management
API	application programming interface
BMS	building management system
CMDB	configuration management database
DCIM	data centre infrastructure management
HVAC	heating, ventilation and air-conditioning
HTTP	hypertext transfer protocol
IP	internet protocol
IT	information technology
ITIL	Information Technology Infrastructure Library
JSON	JavaScript object notation
MAC	media access control
PC	personal computer
PoE	power over Ethernet
REST	representational state transfer
SNMP	simple network management protocol
SOAP	simple object access protocol
WAP	wireless access point
XML	extensible markup language

4 Conformance

For an AIM system to conform to this International Standard, it shall

a) comprise hardware and software components which together meet the requirements of Clause 5,

b) meet the requirements of Clause 7,

c) be implemented in accordance with the requirements of Annex C.
