

AS/NZS ISO/IEC 25002:2024
ISO/IEC 25002:2024

Australian/New Zealand Standard™

Systems and software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — Quality model overview and usage

AS/NZS ISO/IEC 25002:2024

This Joint Australian/New Zealand Standard™ was prepared by Joint Technical Committee IT-015, Software and Systems Engineering. It was approved on behalf of Standards Australia's Standards Development and Accreditation Committee on 15 August 2024 and by the New Zealand Standards Approval Board on 04 September 2024.

This Standard was published on 13 September 2024.

The following are represented on Committee IT-015:

- Australian Computer Society
- Australian Digital Health Agency
- Australian Society for Technical Communication (NSW)
- Business NSW
- Department of Defence (Australian Government)
- Engineers Australia
- Griffith University
- Institute of IT Professionals New Zealand
- International Council on Systems Engineering (INCOSE) New Zealand
- IT Service Management Forum Australia
- Systems Engineering Society of Australia
- Universities New Zealand
- University of New South Wales
- University of Southern Queensland
- University of Technology Sydney

This Standard was issued in draft form for comment as DR AS/NZS ISO/IEC 25002:2024.

Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-015, Software and Systems Engineering, to supersede AS/NZS ISO/IEC 25010:2013, *Systems and software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — System and software quality models*.

The objective of this document is to establish a framework for defining quality models which are composed of quality characteristics and sub-characteristics. In particular, this document provides —

- (a) the concept of a quality model;
- (b) the structure and semantics of quality models;
- (c) the relationship between quality models and the other concepts, including measurement, requirement definition, and evaluation; and
- (d) guidelines, requirements and examples for using quality models.

This document is identical with, and has been reproduced from, ISO/IEC 25002:2024, *Systems and software engineering — Systems and software Quality Requirements and Evaluation (SQuaRE) — Quality model overview and usage*.

As this document has been reproduced from an international document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.

Contents

Preface	ii
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Abbreviated terms	7
5 Guidance for using SQuaRE quality models	7
6 Quality model overview	8
7 Quality model framework	8
7.1 Quality model structure	8
7.2 Quality model categories	10
7.3 Ontology of quality model concepts	11
7.4 Quality requirement priorities and conditions	12
7.5 Applying and extending quality models	13
8 Quality model usage	13
8.1 Stakeholders	13
8.2 Use of quality models within quality processes	14
8.2.1 Introduction to quality model usage examples	14
8.2.2 Quality requirements definition	14
8.2.3 Quality engineering	15
8.2.4 Quality evaluation	15
8.2.5 Quality measurement	16
8.2.6 Quality management	16
Bibliography	18

Foreword

ISO (the International Organization for Standardization) and IEC (the International Electrotechnical Commission) form the specialized system for worldwide standardization. National bodies that are members of ISO or IEC participate in the development of International Standards through technical committees established by the respective organization to deal with particular fields of technical activity. ISO and IEC technical committees collaborate in fields of mutual interest. Other international organizations, governmental and non-governmental, in liaison with ISO and IEC, also take part in the work.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular, the different approval criteria needed for the different types of document should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2 (see www.iso.org/directives or www.iec.ch/members_experts/refdocs).

ISO and IEC draw attention to the possibility that the implementation of this document may involve the use of (a) patent(s). ISO and IEC take no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, ISO and IEC had not received notice of (a) patent(s) which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at www.iso.org/patents and <https://patents.iec.ch>. ISO and IEC shall not be held responsible for identifying any or all such patent rights.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

For an explanation of the voluntary nature of standards, the meaning of ISO specific terms and expressions related to conformity assessment, as well as information about ISO's adherence to the World Trade Organization (WTO) principles in the Technical Barriers to Trade (TBT) see www.iso.org/iso/foreword.html. In the IEC, see www.iec.ch/understanding-standards.

This document was prepared by Joint Technical Committee ISO/IEC JTC 1, *Information technology*, Subcommittee SC 7, *Software and systems engineering*.

Any feedback or questions on this document should be directed to the user's national standards body. A complete listing of these bodies can be found at www.iso.org/members.html and www.iec.ch/national-committees.

Introduction

A wide variety of organizational functions and personal activities are increasingly performed by information systems and IT services. Therefore, high-quality information systems and IT services are essential to providing value and avoiding potential negative consequences for their stakeholders. Unfortunately, quality assurance has traditionally focused primarily on functional requirements, giving far less attention to the non-functional attributes of a system/product. Comprehensive specification, design, and evaluation of all quality attributes of information systems and IT services are critical to optimizing the value of information systems to their stakeholders.

The comprehensive specification of quality characteristics associated with a specific type of information system is represented in a quality model. A quality model can be used as an objective reference supporting requirements definition, evaluation, and validation/verification. By establishing an international agreement on quality characteristics and their measurement, the SQuaRE family of standards provides a framework for reliable world-wide development and delivery of information systems and IT services.

This document is intended to provide guidelines for interpreting and using ISO/IEC 25010, ISO/IEC TS 25011, ISO/IEC 25012, ISO/IEC 25019, and other SQuaRE quality models to be published in the future. Quality models in the SQuaRE family can guide the development of quality measures and evaluation processes used to provide evidence that information systems, ICT products, data, and IT services have the capability to perform their role in achieving the sustainable development goals of SDGs 4, 9, and 11.

This document introduces the structure of SQuaRE quality models and provides requirements for developing them. This document describes how SQuaRE quality models in the quality model division (ISO/IEC 2501n) can be used in conjunction with other SQuaRE standards to guide quality-related activities across the information system lifecycle. These quality models can guide the development of measures for evaluating the quality of information systems and IT services to meet the requirements of their stakeholders. These models provide a common language for describing quality characteristics that can be understood by all stakeholders and should be considered in defining product requirements. They also provide a basis for defining standard quantitative measures of quality characteristics for evaluating the quality properties of a target entity.

The complexity of information systems has grown exponentially with the advent of modern digital technologies. This complexity elevates the importance of non-functional requirements and qualities. SQuaRE quality models can help guide the development of modern digital technologies that are trustworthy and that delight their users.

This document is a part of the SQuaRE series of International Standards, which consists of the following divisions:

- quality management division;
- quality model division;
- quality measurement division;
- quality requirements division;
- quality evaluation division;
- SQuaRE extension division.

Figure 1 (adapted from ISO/IEC 25000) illustrates the organization of the SQuaRE family of International Standards. Similar standards are grouped into divisions. Each division provides guidance and resources for performing a different function in ensuring system and software product quality.

Figure 1 — Organization of SQaRE family of International Standards

The divisions within the SQaRE family are:

- ISO/IEC 25000 to ISO/IEC 25009 - quality management division. The International Standards that form this division define all common models, terms, and definitions referred to by all other International Standards from the SQaRE family. This division also provides requirements and guidance for a supporting function that is responsible for the management of the requirements, specification, and evaluation of software product quality. Practical guidance on the use of the quality models is also provided.
 - ISO/IEC 25000: Guide to SQaRE
 - ISO/IEC 25001: Planning and management
 - ISO/IEC 25002: Quality models overview and usage
- ISO/IEC 25010 to ISO/IEC 25019 - quality model division. The International Standards that form this division present detailed quality models for computer systems and software products, data, IT services and quality-in-use.
 - ISO/IEC 25010: Product quality model
 - ISO/IEC TS 25011: IT service quality model
 - ISO/IEC 25012: Data quality model
 - ISO/IEC 25019: Quality-in-use model
- ISO/IEC 25020 to ISO/IEC 25029 - quality measurement division. The International Standards that form this division include a quality measurement framework, mathematical definitions of quality measures, and practical guidance for their application. Examples are given of quality measures for internal and external properties of products, data, IT services and quality-in-use. Quality measure elements (QME) forming foundations for quality measures for internal and external properties of products are defined and presented.
- ISO/IEC 25030 to ISO/IEC 25039 - quality requirements division. The International Standards that form this division help specify quality requirements based on quality models and quality measures. These quality requirements can be used in the process of eliciting quality requirements for information systems and IT services to be developed or as input for an evaluation process.
- ISO/IEC 25040 to ISO/IEC 25049 - quality evaluation division. The International Standards that form this division provide requirements, recommendations and guidelines for software

product evaluation, whether performed by evaluators, acquirers or developers. The guideline for documenting a measure as an evaluation module is also provided.

- ISO/IEC 25050 to ISO/IEC 25099 - SQuaRE extension division. These International Standards currently include requirements for quality of ready-to-use software product (RUSP), Common Industry Formats for usability reports, and quality models and measures for new technologies such as cloud services and artificial intelligence.

The SQuaRE standards can be used in conjunction with ISO/IEC/IEEE 15288, particularly the processes for the specification and evaluation of quality requirements. ISO/IEC 25030 describes how quality models can be used for systems and software quality requirements; and ISO/IEC 25040 describes how the quality models can be used for systems and software quality evaluation.

The SQuaRE standards can also be used in conjunction with ISO/IEC 33000 family of International Standards which are concerned with software process assessment to provide:

- a framework for software product quality definition in the customer-supplier process;
- support for quality review, verification, and validation, as well as a framework for establishing quantitative quality characteristics;
- support for setting organizational quality goals in the management process.

The SQuaRE standards can be used in conjunction with ISO 9001 (which is concerned with quality assurance processes) to provide:

- support for setting quality goals;
- support for design review, verification, and validation.
