AMERICAN NATIONAL STANDARD

Quality Management and Quality Assurance—Vocabulary

*Prepared by
American Society for Quality Control Standards Committee
for
American National Standards Committee Z-1 on Quality Assurance*

An American National Standard Approved on February 6, 1995

American National Standards: An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether he or she has approved the standard or not, from manufacturing, purchasing, or using products, processes, or procedures not conforming to the standard. American National Standards are subject to periodic review and users are cautioned to obtain the latest edition.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of publication. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.

Foreword

(This Foreword is not a part of American National Standard ANSI/ISO/ASQC A8402-1994, *Quality Management and Quality Assurance—Vocabulary*.)

The ISO 8402:1994 standard was prepared by ISO Technical Committee 176, Quality Management and Quality Assurance. This technical committee is also responsible for all enhancements and revisions to the standard. This international standard is a revised and substantially extended version of ISO 8402:1986.

The United States Technical Advisory Group (TAG) to ISO/TC 176 is active in all of the activities of this committee. It seeks to ensure that all standards written by ISO/TC 176 are consistent with United States' interests. This is done by representative membership on the U.S. TAG, by circulating drafts of proposed standards widely in the United States for comment, and by ensuring that these comments are considered by the appropriate ISO/TC 176 working group. By these means, most new or revised International Standards can be adopted readily as American National Standards. Although there are editorial changes to incorporate American language usage and spelling, the American National Standards are equivalent to the corresponding ISO standards. To demonstrate this equivalence, the numerical designation of the American National Standards is the same numerical designation as the corresponding International Standard with a prefix such as "A," in this case, A8402.

Comments concerning this standard will be welcome and considered in future standards development and revision. They should be sent to the Standards Administrator, American Society for Quality Control, 611 East Wisconsin Avenue, P.O. Box 3005, Milwaukee, WI 53201-3005.
