AMERICAN NATIONAL STANDARD

Guide to Inspection Planning

[Reaffirmation of ANSI/ASQC E2-1984]

*Prepared by
American Society for Quality Control
Energy Division Standards Committee*

An American National Standard Approved on January 12, 1996

Guide to Inspection Planning describes the significant elements that should be considered in the development of inspection activities. The standard is intended to provide generic guidelines for a product/process inspection system.

American National Standard: An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether he or she has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedure not conforming to the standard. American National Standards are subject to periodic review, and users are cautioned to obtain the latest editions.

Caution Notice: This American National Standard may be revised or withdrawn at any time. The procedures of the American National Standards Institute require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of publication. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute.
