

Designation: D 333 – 01

Standard Guide for Clear and Pigmented Lacquers¹

This standard is issued under the fixed designation D 333; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 These test methods cover procedures for testing lacquers and lacquer coatings. The test methods included are listed in Table 1.

NOTE 1—In accordance with Terminology D 16, a lacquer is defined as a coating composition that is based on synthetic thermoplastic filmforming material dissolved in organic solvent(s) and that dries primarily by solvent evaporation. Typical lacquers include those based on nitrocellulose, other cellulose derivatives, vinyl resins, acrylic resins, etc.

NOTE 2—Lacquers may be applied under such diverse conditions, to so many different surfaces, and their dried films may be subjected to so many kinds of wear and exposure that it is not possible to assure desired performance from a single selection of test methods and numerical results therefrom. Those skilled in lacquer technology may find partial assurance of obtaining desired qualities in various types of lacquers through careful selection of the methods covered herein and intelligent interpretation of results therefrom.

NOTE 3—It is intended ultimately to remove all experimental procedures from Test Methods D 333 and to establish them as a guide to the selection of test methods for lacquer and perhaps to interpretation of results therefrom. Temporarily there remain in Test Methods D 333 a few tests that are too short or otherwise presently unsuitable for establishment under separate ASTM designations.

1.2 The values stated in SI units are to be regarded as the standard. The values given in parentheses are for information only.

1.3 *This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety and health practices and determine the applicability of regulatory limitations prior to use.*

TABLE 1 List of Test Methods

Test Method	Section	ASTM Method
General Requirements	4	...
Liquid Materials:		
Color of Clear Lacquers:		
Gardner Color Scale	9	D 1544
Platinum-Cobalt Scale	9	D 1209
Flash Point:		
Tag Closed Cup	11	D 56, D 93, D 3278
Homogeneity:		
Clarity and Cleanness	8	D 2090
Fineness of Pigment Grind	8	D 1210
Nonvolatile Matter	7	D 1644
Sample Preparation	5	...
Viscosity:		
Ford Cup (Efflux)	10	D 1200
Kinematic High Precision	10	D 445
Weight per Gallon (Density)	6	D 1475
Dried Films:		
Abrasion Resistance:		
Air Blast Abrasion Tester	19	D 658
Falling Sand Method	19	D 968
Chip Resistance:	30	D 3170
Color-Pigmented Coatings:		
Spectrophotometric Method	15	E 308
Munsell Color System	15	D 1535
Color Difference-Pigmented Coatings:		
Visual Method	16	D 1729
Instrumental Evaluation of Color		
Differences of Opaque Materials	16	D 2244
Elongation:		
Conical Mandrel	17	D 522
Cylindrical Mandrel	17	D 1737
Film Thickness:		
Nondestructive Magnetic Base	13	D 1186
Nondestructive Nonmagnetic Metallic Base	13	D 1400
Penetration Thickness Gage	13	D 1400
Dial Comparator	13	D 1005
Gloss:		
Specular Gloss	14	D 523
Hardness Indentation Method	18	D 1474
Hiding Power	27	D 2805
Household Chemical Resistance	21	D 1308
Light Stability	31	D 2620
Outdoor Exposure:		
Preparation of Coated Panels:		
Aluminum Alloy Panels	22	D 1733
Steel Panels	22	D 609
Test Procedures:		
Exposure Tests Using Steel Panels	22	D 1014
Evaluating Blistering	22	D 714
Evaluating Chalking	22	D 659
Evaluating Checking	22	D 660
Evaluating Cracking	22	D 661
Evaluating Rusting	22	D 610
Evaluating Erosion	22	D 662
Evaluating Flaking	22	D 772
Panel Preparation:		
Manual Spraying Method	12	...
Automatic Application	12	D 823
Perspiration Resistance	28	D 2204
Plasticizer Migration	29	D 2199
Print Test	20	D 2091
Salt Fog	24	B 117
Temperature-Change Resistance	23	D 1211
Water Fog Testing	25	D 1735
Water Immersion Test	26	D 870

D 1209 Test Method for Color of Clear Liquids (Platinum-Cobalt Scale)⁸

D 1210 Test Method for Fineness of Dispersion of Pigment-Vehicle Systems³

D 1211 Test Method for Temperature-Change Resistance of Clear Nitrocellulose Lacquer Films Applied to Wood⁶

D 1308 Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes⁶

D 1400 Test Method for Nondestructive Measurement of Dry Film Thickness of Nonconductive Coatings Applied to a Nonferrous Metal Base³

D 1474 Test Methods for Indentation Hardness of Organic Coatings³

D 1475 Test Method for Density of Paint, Varnish, Lacquer, and Related Products³

D 1535 Test Method for Specifying Color by the Munsell System³

D 1544 Test Method for Color of Transparent Liquids (Gardner Color Scale)³

D 1644 Test Methods for Nonvolatile Content of Varnishes³

D 1729 Practice for Visual Appraisal of Colors and Color Differences of Diffusely-Illuminated Opaque Materials³

D 1733 Method of Preparation of Aluminum Alloy Panels for Testing Paint, Varnish, Lacquer, and Related Products⁹

D 1735 Practice for Testing Water Resistance of Coatings Using Water Fog Apparatus³

D 1737 Test Method for Elongation of Attached Organic Coatings with Cylindrical Mandrel Apparatus⁷

D 2090 Test Method for Clarity and Cleanness of Paint and Ink Liquids¹⁰

D 2091 Test Method for Print Resistance of Lacquers⁶

D 2199 Test Method for Measurement of Plasticizer Migration from Vinyl Fabrics to Lacquers⁶

D 2204 Test Method for Perspiration Resistance of Organic Coatings¹¹

D 2244 Test Method for Calculation of Color Differences from Instrumentally Measured Color Coordinates³

D 2620 Test Method for Light Stability of Clear Coatings⁶

D 2805 Test Method for Hiding Power of Paints by Reflectometry³

D 3170 Test Method for Chipping Resistance of Coatings⁶

D 3278 Test Methods for Flash Point of Liquids by Small Scale Closed-Cup Apparatus³

E 308 Practice for Computing the Colors of Objects by Using the CIE System³

3. Significance and Use

3.1 These test methods are intended to compile as well as provide screening tests in evaluating clear and pigmented lacquers as used in different coating operations.

3.2 Each coating system may contain from a simple one coat operation to a multicoat finishing system.

Dry Film Thickness of Nonmagnetic Coatings Applied to a Ferrous Base³

D 1200 Test Method for Viscosity by Ford Viscosity Cup³
