

Designation: D5586 – 01

Standard Tables of Body Measurements for Women Aged 55 and Older (All Figure Types)^{1,2}

This standard is issued under the fixed designation D5586; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ε) indicates an editorial change since the last revision or reapproval.

INTRODUCTION

These tables were developed from original research conducted by Reich and Goldsberry³ at the University of Arizona in 1993. The study included 6786 subjects represented geographically by 38 states. Subjects were measured in 58 body locations, 45 of which duplicated measurements published by the U.S. Department of Commerce as PS 42-70² based on research conducted in 1942 by O'Brien and Shelton⁴ including 1970 revisions. The 13 additional measurements provided in the 1993 technical report further depict physiological changes that occur in the older female figure. The PS 42-70 data, represented by only 2 % of older women, continues to be used as a baseline for measurements and proportions for all adult women in the domestic sizing system. These tables reflect the proportions and maturity patterns of women aged 55 and older, not currently represented in adult female figure types and size categories of the domestic sizing system now in use. Further description of this market segment and consumer sizing issues are outlined by Goldsberry.⁵

1. Scope

1.1 This document represents research methodology and the tables represent charted data from subjects. Some terminology is specific to the research. The data represent the first body measurements ever taken of women aged 55 and older and is not a standard of average current apparel industry practices as represented in all other sizing standards.

1.2 These tables list body measurements of adult women age 55 and over. The body measurements tables can be used as a baseline in designing apparel for adult women in this age group, taking into account such factors as fabric type, desired ease of body movement, styling, and fit.

1.3 Measurement tables correspond to the figure types and numerical size designations in the PS 42-70 database. Until body measurements of all adult women are updated, companies will have to analyze the older customer's differences by body measurements and proportions instead of hang tag numbers, and adapt them to currently marketed sizes and figure types. Companies especially affected are those who are today using smaller numbered hang tag designations, who offer mainly S, M, and L sizes, or who have adjusted their charts from the PS 42-70 database to reflect the specific body measurements of their 1990's customer.

1.4 The values stated in either acceptable SI units or inch-pound units shall be regarded separately as standard. The values stated in each system may not be exact equivalents; therefore, each system must be used independently of the other, without combining values.

ISO 8559 Garment Construction and Anthropometric Surveys—Body Dimensions

3. Terminology

3.1 Definitions:

3.1.1 For definitions of terms relating to body measurements refer to Terminology **D5219**.

3.1.2 For definitions of other textile terms, refer to Terminology **D123**.

4. Significance and Use

4.1 The use of the body measurement information given in **Tables 1-7** will assist manufacturers in developing patterns and garments consistent with the current anthropometric characteristics of the older adult female population. This practice should in turn reduce or minimize current consumer confusion and dissatisfaction related to apparel sizing. (Also refer to **D5585** and **ISO 3635-1981** and 8559.)

4.2 As an aid in using **Tables 1-7**, **Table 8** is provided as a guide for comparison on only the Misses Figure Type size labels and body proportions in D5586 (55 and older women Misses Figure Type—**Table 4**) with the Misses current best practices (**D5585**). Document D5586 includes measurement

charts for all figure types contained in the PS-42-70 database to which the 55 and older database (D5586) was compared. **Table 8** can further assist designers, product develop managers and patternmakers in using this document who are designing apparel for the older woman consumer market segment.

4.3 The importance of **Table 8** is to emphasize that over the years since the PS-42-70 measurement database was published, sets of measurement proportions have been assigned increasingly smaller size label designations. Thus, proportion comparisons of only size labeling cannot be directly made to those currently used when referencing the D5586 tables. In **Table 8**, it is evident that the **D5585** Misses Figure type size label numbers are approximately four sizes smaller than those assigned to D5586 **Table 4** which references the same general proportions as in the PS-42-70 database. Thus, when converting data from all figure types in D5586, refer to the general measurement proportions, and not the designated size label when developing and grading patterns.

4.4 Measurements appearing in the D5586 tables without comparable measurements in **D5585** (current Misses best practices data) represent additional body measurements taken for the D5586 database for older women. Also, comparable data were not available in extremely small and large sizes for comparison. All measurements in **Table 8** are inches only.
