ANSI/AWWA G485-18
(First Edition)

AWWA Management Standard

Direct Potable Reuse Program Operation and Management

Effective date: June 1, 2018.

First edition approved by AWWA Board of Directors Jan. 20, 2018.

Approved by American National Standards Institute Feb. 27, 2018.

AWWA Standard

This document is an American Water Works Association (AWWA) standard. It is not a specification. AWWA standards describe minimum requirements and do not contain all the engineering and administrative information normally contained in specifications. The AWWA standards usually contain options that must be evaluated by the user of the standard. Until each optional feature is specified by the user, the product or service is not fully defined. AWWA publication of a standard does not constitute endorsement of any product or product type, nor does AWWA test, certify, or approve any product. The use of AWWA standards is entirely voluntary. This standard does not supersede or take precedence over or displace any applicable law, regulation, or code of any governmental authority. AWWA standards are intended to represent a consensus of the water industry that the product described will provide satisfactory service. When AWWA revises or withdraws this standard, an official notice of action will be placed in the Official Notice section of *Journal - American Water Works Association*. The action becomes effective on the first day of the month following the month of *Journal AWWA* publication of the official notice.

American National Standard

An American National Standard implies a consensus of those substantially concerned with its scope and provisions. An American National Standard is intended as a guide to aid the manufacturer, the consumer, and the general public. The existence of an American National Standard does not in any respect preclude anyone, whether that person has approved the standard or not, from manufacturing, marketing, purchasing, or using products, processes, or procedures not conforming to the standard. American National Standards are subject to periodic review, and users are cautioned to obtain the latest editions. Producers of goods made in conformity with an American National Standard are encouraged to state on their own responsibility in advertising and promotional materials, or on tags or labels, that the goods are produced in conformity with particular American National Standards.

CAUTION NOTICE: The American National Standards Institute (ANSI) approval date on the front cover of this standard indicates completion of the ANSI approval process. This American National Standard may be revised or withdrawn at any time. ANSI procedures require that action be taken to reaffirm, revise, or withdraw this standard no later than five years from the date of ANSI approval. Purchasers of American National Standards may receive current information on all standards by calling or writing the American National Standards Institute, 25 West 43rd Street, Fourth Floor, New York, NY 10036; (212) 642-4900; or e-mailing info@ansi.org.

Committee Personnel

The AWWA Standards Committee on Direct Potable Reuse Programs, which reviewed and approved this standard, had the following personnel at the time of approval:

Kanwal Oberoi, *Chair*

General Interest Members

D.K. Ammerman, Carollo Engineers, Orlando, Fla.

J.A. Cathcart, * Arcadis, Irvine, Calif.

M. Condran, † GHD, Tampa, Fla.

J. Crook, Consultant, Mattapoisett, Mass.

A.D. Deister, HDR, Inc., Sacramento, Calif.

D.M. Flancher, ‡ AWWA Staff Engineer, Denver, Colo.

N.A. Fontaine, * Carollo Engineers, Sacramento, Calif.

C. Hill, Arcadis, Tampa, Fla.

E. Leung, ‡ Standards Council Liaison, California State Water Board, Div. of Drinking Water, Richmond, Calif.

D. MacNevin, † Tetra Tech, Tampa, Fla.

J. Mattingly, † Water Environment & Research Foundation, Alexandria, Va.

J.J. Mosher, † Water Environment & Research Foundation, Alexandria, Va.

J.A. Oppenheimer, MWH, Pasadena, Calif.

A.E. Rimer, † Black & Veatch, Cary, N.C.

B.D. Stanford, Hazen & Sawyer, Raleigh, N.C.

P.A. Tennyson, † Katz & Associates, San Diego, Calif.

D. Vandertulip, Vandertulip WaterReuse Engineers, San Antonio, Texas

S.H. Via, AWWA, Washington, D.C.

R.L. Wolfe, † Fullerton, Calif.

* Alternate

† Informational, nonvoting

‡ Liaison, nonvoting

Producer Members

D.J. Kroll, Hach Company, Loveland, Colo.

User Members

J.D. Brown, Contra Costa Water District, Concord, Calif.

S. Deshmukh, West Basin Municipal Water District, Carson, Calif.

M. Gasca, Los Angeles County Sanitation Districts, Whittier, Calif.

P. Hyer, Pompano Beach Water Treatment Plant, Pompano Beach, Fla.

J.A. Jackson, City of Altamonte Springs, Altamonte Springs, Fla.

K.E. Menard, City of Dallas, Dallas, Texas

D.K. Nix, City of Wichita Falls, Wichita Falls, Texas

K. Oberoi, Charleston Water System, Charleston, S.C.

C.L. Riley, Spokane Valley, Wash.

T. Roy, San Diego County Water Authority, San Diego, Calif.

T.R. Slifko, Metropolitan Water District of Southern California, La Verne, Calif.

Contents

All AWWA standards follow the general format indicated subsequently. Some variations from this format may be found in a particular standard.

Foreword

This Foreword is for information only and is not a part of ANSI/AWWA G485.*

I. Introduction.

I.A. *Background.* The AWWA utility management standards are designed to serve water, wastewater, and reuse utilities—hereafter referred to as the *water sector*—and their customers, owners, service providers, and government regulators. The standards developed under the program are generally intended to improve a utility's overall operations and service. One aspect of the standards program is an effort to establish formal management and operations guidelines. These guidelines identify appropriate practices and procedures the implementation of which will promote effective and efficient utility operations and contribute to protection of public health, public safety, and the environment.

AWWA's standards process has been used for more than 90 years to produce American National Standards Institute (ANSI)-approved standards for materials and processes that are used by the water sector. These standards are recognized worldwide and have been adopted by many utilities and organizations. Likewise, this performance standard is developed using the same ANSI-recognized formal process. Volunteer standards committees establish standard practices in a uniform and appropriate format.

Formal standards committees have been and continue to be formed to address the individual standard practices for the diverse areas of water, wastewater, and reuse utility operations. A formal standards committee was created in November 2014 to develop this standard for direct potable reuse (DPR) program operation and management. This standard is the outcome of the Direct Potable Reuse Standards Committee.

There are two forms of planned direct potable reuse (DPR), in which highly treated wastewater is introduced at various locations into an existing water supply system; and indirect potable reuse (IPR), in which treated wastewater is introduced into an environmental buffer (e.g., a groundwater aquifer or surface water reservoir, lake, or river) before the blended water is introduced into a water supply system.

DPR has two distinct forms: (1) advanced treated water is produced in an advanced water treatment facility and is introduced into the raw water supply immediately upstream of a drinking water treatment facility; and (2) an advanced water treatment facility delivers treated water directly to a public water system's treated water conveyance

* American National Standards Institute, 25 West 43rd Street, Fourth Floor, New York, NY 10036.

or distribution system. This standard covers direct potable reuse that is advanced treated water as part of the potable water supply without the use of an environmental buffer and with or without retention in an engineered storage buffer.

I.B. *History.* Recognizing that meeting future water needs requires innovative management strategies today, the AWWA Standards Council authorized the development of a management standard on DPR program operation and management in 2014. This is the first edition of this standard. It was approved by the AWWA Board of Directors on Jan. 20, 2018.

I.C. *Acceptance.* In May 1985, the US Environmental Protection Agency (USEPA) entered into a cooperative agreement with a consortium led by NSF International (NSF) to develop voluntary third-party consensus standards and a certification program for direct and indirect drinking water additives. Other members of the original consortium included the Water Research Foundation (formerly AwwaRF) and the Conference of State Health and Environmental Managers (COSHEM). The American Water Works Association and the Association of State Drinking Water Administrators (ASDWA) joined later.

In the United States, authority to regulate products for use in, or in contact with, drinking water rests with individual states.* Local agencies may choose to impose requirements more stringent than those required by the state. To evaluate the health effects of products and drinking water additives from such products, state and local agencies may use various references including

1. Specific policies of the state or local agency.
2. Two standards developed under the direction of NSF:† NSF/ANSI‡ 60, Drinking Water Treatment Chemicals—Health Effects, and NSF/ANSI 61, Drinking Water System Components—Health Effects.
3. Other references, including AWWA standards, *Food Chemicals Codex*, *Water Chemicals Codex*,§ and other standards considered appropriate by the state or local agency.

Various certification organizations may be involved in certifying products in accordance with NSF/ANSI 61. Individual states or local agencies have authority to accept or accredit certification organizations within their jurisdiction. Accreditation of certification organizations may vary from jurisdiction to jurisdiction.

* Persons outside the United States should contact the appropriate authority having jurisdiction.

† NSF International, 789 North Dixboro Road, Ann Arbor, MI 48105.

‡ American National Standards Institute, 25 West 43rd Street, Fourth Floor, New York, NY 10036.

§ Both publications available from National Academy of Sciences, 500 Fifth Street, NW, Washington, DC 20001.

Annex A, “Toxicology Review and Evaluation Procedures,” to NSF/ANSI 61 does not stipulate a maximum allowable level (MAL) of a contaminant for substances not regulated by a USEPA final maximum contaminant level (MCL). The MALs of an unspecified list of “unregulated contaminants” are based on toxicity testing guidelines (noncarcinogens) and risk characterization methodology (carcinogens). Use of Annex A procedures may not always be identical, depending on the certifier.

ANSI/AWWA G485 does not address additives requirements. Users of this standard should consult the appropriate or local agency having jurisdiction in order to

1. Determine additives requirements, including applicable standards.
2. Determine the status of certifications by parties offering to certify products for contact with, or treatment of, drinking water.
3. Determine current information on product certification.

II. Special Issues.

II.A. *Regulatory Considerations.* There are no federal statutes or regulations that specifically identify or address potable reuse. As a result, purveyors must work with their state regulators to obtain approval for a DPR facility.* The specific regulatory process will vary from state to state. However, DPR facilities must comply with all existing applicable wastewater, recycled/reclaimed/reuse water, and drinking water regulations.

II.B. *Pathogen and Chemical Control.* Treatment performance and monitoring include the wastewater treatment facility, the advanced water treatment facility, and any downstream water treatment facilities. DPR systems must meet all applicable Safe Drinking Water Act (SDWA) requirements including source control, and provide protection from pathogens, chemical constituents, and contaminants of emerging concern that may pose risks to public health.

III. Use of This Standard. It is the responsibility of the user of an AWWA standard to determine that the products and provisions described in that standard are suitable for use in the particular application being considered.

III.A. *Options and Alternatives.* The user should consider the following when developing a DPR water program:

* Texas established the following regulations for quality, design, and operational requirements of water reuse projects: 30 TAC Chapter 210; 30 TAC Chapter 321, Subchapter P; Texas Water Code §5.102, §5.103, §26.011, §26.0271, and §26.121. California, in compliance with Water Code Section 13563, issued the following report: “Investigation of the Feasibility of Developing Uniform Water Recycling Criteria for Direct Potable Reuse,” December 2016.
