

Methods for

Analysis of dried milk and dried milk products —

Part 8: Determination of lactic acid and lactates content of dried milk

[ISO title: Dried milk — Determination of lactic acid and lactates
content — Enzymatic method]

IMPORTANT NOTE. It is essential that this Part be read in conjunction with Part 1 “General introduction, including preparation of laboratory samples”, published separately.

UDC [637.143 + 664.97]:547.472.3

National foreword

This Part of BS 1743, which has been prepared under the direction of the Dairying Standards Committee, is identical with ISO 8069:1986 “*Dried milk — Determination of lactic acid and lactates content — Enzymatic method*”, prepared by ISO/TC 34, Agricultural food products, of the International Organization for Standardization (ISO).

Terminology and conventions. The text of the International Standard has been approved as suitable for publication as a British Standard without deviation. Some terminology and certain conventions are not identical with those used in British Standards; attention is drawn especially to the following.

The comma has been used as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker. Also in British Standards it is current practice to use the symbol “L” for litre (and in its sub-multiples), rather than “l”, and to use the spelling “sulphur”, etc., instead of “sulfur”, etc.

Wherever the words “International Standard” appear, referring to this standard, they should be read as “British Standard”.

Cross-references

International Standard	Corresponding British Standard
