B.S. 2537 : 1955

THIS BRITISH STANDARD, having been approved by the Fine Chemicals Industry Standards Committee and endorsed by the Chairman of the Chemical Divisional Council, was published by the authority of the General Council on 18th January, 1955.

The Institution desires to call attention to the fact that this British Standard does not purport to include all the necessary provisions of a contract.

In order to keep abreast of progress in the industries concerned, British Standards are subject to periodical review. Suggestions for improvements will be recorded and in due course brought to the notice of the committees charged with the revision of the standards to which they refer.

A complete list of British Standards, numbering over 5000, indexed and cross-indexed for reference, together with an abstract of each standard will be found in the Institution's Yearbook.

This standard makes reference to the following British Standards :—

- B.S. 571. Flasks for the determination of distillation range.
- B.S. 593. Laboratory thermometers.
- B.S. 605. Distillation receivers (including Crow receivers).
- B.S. 658. Apparatus for the determination of distillation range.
- B.S. 1752. Sintered disk filters for laboratory use.

British Standards are revised, when necessary, by the issue either of amendment slips or of revised editions. It is important that users of British Standards should ascertain that they are in possession of the latest amendments or editions.

The following B.S.I. references relate to the work on this standard :—
