Foreword

This standard makes reference to the following British Standard:—

BS 1309, *Sampling and analysis of vegetable and chrome tanned leathers*.

This British Standard has been based, by agreement, on the work of the Made-up Clothing Sub-committee of the Joint Equipment Standardization Committee of the Ministry of Defence.

The specification is intended to provide boots suitable for use by Government, local authority and industrial fire brigades. The J.E.S.C. organization has been responsible for co-ordinating the requirements of the Government Departments and Services. The needs of other civilian authorities have been taken into account in drafting the standard.

Although the specification provides for both hand and machine closed boots, it is hoped that hand closing methods will continue to be generally used in the trade.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 7 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
