Foreword

This British Standard, one of a series for timber and plywood of a quality suitable for aerospace purposes, which was first published in September 1952, has been revised.

During the revision consideration has been given to the qualities of timber available and the standard has been extended to cover timber having a grain inclination of up to one in twelve for each of the two existing densities. A requirement relating to the number of annual rings has also been included. All quantities are given in both imperial and metric units. These two sets of requirements are not interchangeable and the relevant set should be applied, depending on whether the timber is ordered in imperial or metric units.

This standard makes reference to the following British Standard:

BS V 38, *Sitka spruce as rough timber*.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 and 2 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Amendments issued since publication

Amd. No.	Date	Comments

This British Standard, having been approved by the Aerospace Industry Standards Committee and endorsed by the Chairman of the Engineering Divisional Council, was published under the authority of the General Council of the Institution on 26 February 1968
