Foreword

This British Standard forms one of a series relating to tubular framed hospital equipment.

The revision has been undertaken at the request of the Department of Health and Social Security. In this revision provision has been made for a gap in the bowl ring to allow passage of the arm when lifting the bowl, and the smaller bowl size of 305 mm diameter has been deleted so that only one bowl of 355 mm diameter is specified.

Certification. Attention is drawn to the certification facilities described on the inside back cover of this standard.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 6, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.
