Foreword

This British Standard was first published in 1957. It was revised in 1967 to permit the use of certain synthetic rubbers in addition to natural rubber, and to include additional requirements relating to the limits on the compression set and the approval in respect of freedom from odour.

This revision updates the requirements and introduces metric units. The requirement to produce the hose in standard lengths is now thought to be unrealistic and has been deleted. The purchaser is required to specify the lengths required in the contract or order.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 7 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

This British Standard, having been prepared under the direction of the Aerospace Standards Committee, was published under the authority of the Executive Board on 30 October 1981
