Foreword

This British Standard has been prepared under the direction of the Aerospace Standards Committee and is identical with ISO 2657-1976 “*Environmental tests for aircraft equipment — Part 2.7: Change of temperature*”, prepared by Technical Committee ISO/TC 20, Aircraft and space vehicles, of the International Organization for Standardization (ISO).

Terminology. The text of the international standard has been accepted as suitable for publication, without deviation, as a British Standard. Certain terminology is used, however, that is not identical with that used in British Standards. Attention is therefore drawn to the following.

Wherever the words “International Standard”, relating to this publication, appear, they should be interpreted as “British Standard”.

Cross references. There are at present no equivalent British Standards for the international standards referred to in the text. The committee responsible for this standard has studied these and confirms that for the purposes of this standard the technical requirements are acceptable.

In 5.1 reference is made to ISO 2651. The relevant details from that publication are included in National appendix A and insofar as they are called up in the main body of this standard as requirements to be complied with, they are to be regarded as mandatory for the purposes of this standard.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 6, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Amendments issued since publication

Amd. No.	Date of issue	Comments

This British Standard, having been prepared under the direction of the Aerospace Standards Committee, was published under the authority of the Executive Board on 31 January 1978
