Foreword

These recommendations make reference to the following British Standards:

BS 3430, *Sampling of paper and board for testing*.

BS 3431, *Conditioning of paper and board test samples*.

The committee concerned with methods of test for paper, board and pulp has already produced a considerable number of British Standard test methods and has an extensive programme of work in hand. There are several instances in which it would be desirable to prepare standard methods for determining certain properties of paper and board but in the present state of knowledge this is not practicable. Experience has shown that there are instances, for example, in which a test is satisfactory only for a limited application, or that a method is suitable for mill control purposes but not sufficiently precise for use in case of a dispute. Nevertheless, it is felt that the issue of some of these test methods in the form of recommendations rather than as British Standard methods will be helpful to users. These recommendations are, therefore, published under the authority of the Paper Industry Standards Committee.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
