

Method for

The determination of the thickness of corrugated fibreboard

Foreword

This standard makes reference to the following British Standards:
BS 3430, *Sampling of paper and board for testing*.
BS 3431, *Conditioning of paper and board test samples*.
BS 4311, *Metric gauge blocks*.

This British Standard is one of a series relating to the testing of paper and board, published under the authority of the Paper Industry Standards Committee.

The International Organization for Standardization is at present considering a number of methods relating to the testing of corrugated fibreboard, and it seems likely that the procedure described in this standard for determining thickness will eventually be adopted as an International Standard.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.
