Foreword

This Part of BS 5350 has been prepared under the direction of the Adhesives Standards Committee. Group G comprises several test methods chiefly intended for the assessment of the performance characteristics of anaerobic adhesives used primarily in mechanical engineering. They can also form part of a programme of assessment of the behaviour of anaerobic adhesives under a variety of environmental conditions. The method in this Part is based on a procedure in Aerospace Material Specification DTD 5628 *“Test methods and procurement procedures for one-part anaerobic polymerisable compounds for locking, sealing and retaining”*, issued by the Procurement Executive of the Ministry of Defence, but the procedure has been modified to avoid the use of cadmium.

WARNING NOTE. This British Standard calls for the use of substances and/or procedures that may be injurious to health if adequate precautions are not taken. It refers only to technical suitability and does not absolve the user from legal obligations relating to health and safety at any stage.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 to 4, an inside back cover and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Amendments issued since publication

Amd. No.	Date of issue	Comments

This British Standard, having been prepared under the direction of the Adhesives Standards Committee, was published under the authority of the Board of BSI and comes into effect on 27 February 1987
