

Powder metallurgical materials and products —

Part 3: Methods of testing sintered metal materials and products, excluding hardmetals —

Section 3.8 Determination of transverse rupture strength

[ISO title: Sintered metal materials, excluding hardmetals —
Determination of transverse rupture strength]

UDC 621.762:669-138.8:620.173.24

National foreword

This Section of BS 5600 is identical with ISO 3325 “*Sintered metal materials, excluding hardmetals — Determination of transverse rupture strength*”.

The ISO technical committee responsible for the preparation of International Standards for powder metallurgical materials (ISO/TC 119) has removed the requirement for mandatory sampling for all powder metallurgical International Standards relating to test methods (Resolution 43, ISO/TC 119 Plenary meeting, 14 May 1976). The clauses in the International Standards that specify sampling, and the sampling references, will be deleted at the appropriate revision stages. Therefore, 6.1 of this Section and, in consequence clause 3, do not apply to the test method specified in this Section of this British Standard and should be regarded as deleted.

Terminology and conventions. The text of the International Standard has been approved as suitable for publication, without deviation, as a British Standard. Some terminology and certain conventions are not identical with those used in British Standards; attention is especially drawn to the following. The comma has been used as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker. Where the words “International Standard” appear, referring to this standard, they should be interpreted as “British Standard”.

Additional information. This Section is one of a series that comprises BS 5600. A list of the Sections of BS 5600 appears in Table 1 of the introduction and contents (Section 1.1).
Section 1.2 is a glossary of technical terms that have particular application in the powder metallurgical industry and which are used in the Sections of this British Standard.
A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, pages 1 and 2 and a back cover.
This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Amendments issued since publication

Amd. No.	Date of issue	Comments

This British Standard, having been prepared under the direction of the Iron and Steel Standards Committee, was published under the authority of the Executive Board and comes into effect on 28 February 1979
