Summary of pages

This document comprises a front cover, an inside front cover, pages i to ii, pages 1 to 92, an inside back cover and a back cover.

Foreword

Publishing information

This part of BS 6100 is published by BSI and came into effect on 31 March 2010. It was prepared by Technical Committee B/500, *Basic data*. A list of organizations represented on this committee can be obtained on request to its secretary.

Supersession

This part of BS 6100 supersedes BS 6100-0:2002, which is withdrawn.

Relationship with other publications

BS 6100 consists of the following parts.

- *Part 0: Introduction and index.*
- *Part 1: General.*
- *Part 2: Spaces, building types, environment and physical planning.*
- *Part 3: Civil engineering – General.*
- *Part 4: Civil engineering – Transport.*
- *Part 5: Civil engineering – Water engineering, environmental engineering and pipelines.*
- *Part 6: Construction parts.*
- *Part 7: Services.*
- *Part 8: Work with timber and wood-based panels.*
- *Part 9: Work with concrete and plaster.*
- *Part 10: Contract terms.*
- *Part 11: Performance characteristics, measurement and joints.*
- *Part 12: Plant, equipment and persons.*

Information about this document

BS 6100 has been completely restructured and compiled on different principles than previously. Consequently, this part of BS 6100 represents a full revision of the standard.

This part of BS 6100 is a general introduction to and explanation of the BS 6100 vocabulary and provides an alphabetical index of all the terms in all parts of BS 6100. It is intended that individual parts of BS 6100 are used in conjunction with BS 6100-0 because they do not contain indexes themselves. The index will be amended as other parts of BS 6100 are revised.

BS 6100-1 reproduces verbatim ISO 6707-1 and provides a vocabulary of general terms for the building and civil engineering industry. It is essential that individual parts of BS 6100 are read in conjunction with BS 6100-1.

This vocabulary has been published to ensure co-ordination and consistency in the use of terminology throughout the building and civil engineering industry. It is intended as a basic reference document providing a comprehensive list of terms with the aim of promoting a better understanding between various sections of the industry and facilitating trade. It consists of several parts devoted to specific subject

areas, each part tying in with other more specialized British, European and international vocabularies.

The aim is to achieve the harmonization of definitions across a variety of sources. This is a two way process and, as BS 6100 will be revised to take account of new requirements observed in new standards, so the use of the definitions in this vocabulary will be encouraged, to promote wider acceptance and recognition of standardized terminology.

Parts of BS 6100 do not repeat (or provide alternatives for) terms defined in other standards or in other parts of BS 6100. However, it does refer to where definitions can be found and includes a bibliography of all referenced standards.

This vocabulary has been structured so that the general terms for basic concepts are grouped together to form a foundation on which more specialized terms are based. The most general terms are given in BS 6100-1, with the more specialized terms given in other parts.

The definitions in this vocabulary are intended for general use, whereas those in standards that set out specifications or codes of practice are intended to clarify the meaning of terms in the context of that particular standard. Legal definitions in a particular statute are for the purposes of that statute and might be different from the definitions in this vocabulary.

Presentational conventions

Details of the structure, layout and presentational conventions used in BS 6100 are given in Clause 2.

Contractual and legal considerations

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.

Introduction

The UK building and civil engineering industry covers a wide range of people and skills and operates in many countries; it brings together many different developing technologies. Standardizing the formal language that the industry uses for instructions, specifications, orders, etc., helps to improve communications and avoid ambiguity. Previous vocabularies in the building and civil engineering industry have often been restricted to specialist fields and have largely been known and used only by specialists. The improvement effected by bringing these vocabularies together, removing conflicts and inconsistencies, and supplementing them with more general terms will ensure that they become more widely used throughout the industry and will raise the level of awareness of the importance of using language correctly.

An important difference between dictionaries and vocabularies is that the former describes all the idiosyncrasies of everyday use whereas a vocabulary attempts to eliminate the conflicts and prevent overlapping use. The conflicts are eliminated by looking for the concepts implicit in the terms everybody uses. This can mean reducing the number of terms available for certain concepts, giving prominence to national terms over regional terms and in some cases, restricting the meaning of terms to narrower concepts than those in everyday use. Greater precision of language is achieved when a single term is used for a concept, and where the relationships between concepts are shown explicitly. Where the vocabulary corresponds with, or utilizes material from, an international or European standard, then precise relationships between concepts and terms in a multiplicity of languages can be established.

Technological developments in the industry and in the way information is handled require an up-to-date and more precise language. This vocabulary is intended as a step towards developing such a language, and should both assist the reader of technical literature to understand the meaning of terms used, and assist technical writers to use terms in their correct and up-to-date sense. It can also be used as a model of good practice in terminology work.

1 Scope

This part of BS 6100 gives general information relevant to all parts of this vocabulary, background information, guidance on using the vocabulary, a list of all parts and an index of all the terms in BS 6100.

This vocabulary covers all topics that are the responsibility of the Sector Committee for Building and Civil Engineering. Some terms are included which do not have a special meaning for the building and civil engineering industry but are considered necessary to help readers understand the more specialized terms. Typically these include general physical properties and terms relating to testing and standardization.

Scottish terms and important regional terms are included, either in their own right or as accepted alternatives to preferred terms. Local terms, where included, are given as deprecated equivalents of preferred terms.

2 Vocabulary structure

2.1 General

BS 6100 is divided into parts. This part contains a comprehensive index of terms which will be updated periodically when other parts are amended or revised, or when new parts are published. To avoid the duplication of data found in this index, other parts of BS 6100 do not contain their own index. As a result, it is essential that individual parts of BS 6100 are read in conjunction with this part.

Each part of the vocabulary includes a contents list and a foreword. Guidance on the use of the vocabulary is given in the foreword, together with any information particular to the part, e.g. existing standards that are superseded.

The definitions in this vocabulary have been formulated in accordance with ISO 704, *Terminology work – Principles and methods*, and in such a manner that each definition would still make sense if removed from its context.

As is increasingly the strategy for vocabularies, BS 6100 does not repeat definitions from other standards but instead makes reference to them.

The layout of each part of the vocabulary is designed in accordance with ISO 10241 with terms arranged in a classified order and numbered in accordance with ISO 2145. Within each part, the terms are arranged in groups of related terms (e.g. roofs and roofing, floors and flooring). The headings for the groups are given in the contents list of each part. Within each group the terms are further divided into subgroups of basic concepts, e.g. spaces, parts, activities, properties. Within each subgroup the terms are arranged in an order that is based on how they relate to each other.

2.2 Term numbers

Each term has an individual number consisting of seven digits in two parts, the first of two digits, the second of five. Each number tells the following information about the term.

- a) The first two digits represent which part of BS 6100 the term belongs to.
- b) The third digit represents which group of terms it belongs to within the part.
- c) The fourth digit represents which subgroup of terms it belongs to within the group.
- d) The fifth to seventh digits determine the location of the term within the subgroup.

Because of the divergence between entry numbering and section numbering, the term numbering is explained at the beginning of each part of the vocabulary.

Because BS 6100-1 is a dual numbered international standard it has a different numbering system.

NOTE The index locates a term by its term number, not by the number of the page on which it occurs.

2.3 Cross references

Bold words within a definition indicate terms that are defined elsewhere in the same part of BS 6100, other parts of BS 6100 or other standards. Reference to where the term is defined is given in parenthesis after the emboldened term.

NOTE 1 References to terms defined in BS 6100-1 are shown giving only the part number, e.g. (01); references to terms defined in all other parts of BS 6100 are shown using their full reference number, e.g. (07 59005).

NOTE 2 Where more than one definition source could be referred to, the reference containing the definition of most general applicability is given.

Alternative terms are given in medium type below preferred terms which are given in bold type. All alternative terms have the status of being deprecated. Abbreviations are given in bold type below the terms to which they relate.

In the vocabulary, terms of more than one word are written in their natural word order, e.g. pedestal elbow, and the word order is not inverted, e.g. elbow, pedestal. However, inverted forms of a term are included in the index in BS 6100-0.

EXAMPLE

07 22134 **lacing course**

course (07 32060) built into a **wall** (01) of random **rubble stone** (BS EN 12670) or **flint** (BS EN 12670) to give added stability and **strength** (17 27007)

2.4 Preferred terms, alternative terms and abbreviations

Preferred terms are given in the vocabulary in bold type, below the term number, and listed in bold type in the index.

Alternative terms are given in the vocabulary in medium type below preferred terms, with their status indicated. These terms are also entered in the index in medium type.

Abbreviations are given in the vocabulary in bold type below the terms to which they relate.

Alternative terms and abbreviations relate back to the preferred term, and are therefore entered into the index against the term number of the preferred term.

2.5 Repeated terms

A few terms in BS 6100-1 are repeated with the same definition in other parts of the vocabulary. Homographs, i.e. terms having more than one meaning, are cross-referenced by means of "cf" only in BS 6100-1. In such cases the term is listed only once in the index. In most cases where more than one number is given against a term in the index this indicates a homograph or a US equivalent term.

2.6 Term inversion

In the vocabulary, terms of more than one word are written in their natural word order, e.g. pedestal elbow, and the word order is not inverted, e.g. elbow, pedestal. However, inverted forms of a term

are included in the index alongside the term number for the entry in natural word order.

2.7 Plural terms

Terms are only given in the singular form, even when the plural form is more common (unless the term is only found in the plural form).
