

Guide to

Construction and use of 130 mm (5.25 in) flexible disk cartridges for data interchange using modified frequency modulation recording at 7958 ftprad, 1.9 tpmm (48 tpi) on both sides —

Part 2: Track format A

[ISO title: Information processing — Data interchange
on 130 mm (5.25 in) flexible disk cartridges using modified
frequency modulation recording at 7 958 ftprad, 1,9 tpmm (48 tpi),
on both sides — Part 2: Track format A]

The European Standard EN 27487-2:1989 has the status of a
British Standard.

UDC 681.327.634:002.2:004.14

Committees responsible for this British Standard

The preparation of this British Standard was entrusted by the Information Systems Technology Standards Committee (IST/-) to Technical Committee IST/4, upon which the following bodies were represented:

- Association for Payment Clearing Services
- British Computer Society
- British Telecommunications plc
- Business Equipment and Information Technology Association
- Department of Trade and Industry (National Physical Laboratory)
- HM Customs and Excise
- HM Treasury (Central Computer and Telecommunications Agency)
- Institute of Administrative Management
- Institute of Quality Assurance
- Institution of Electrical Engineers
- Institution of Electronic and Radio Engineers
- Institution of Mechanical Engineers
- National Computing Centre Ltd.
- Post Office

This British Standard, having been prepared under the direction of the Information Systems Technology Standards Committee, was published under the authority of the Board of BSI and comes into effect on 28 February 1989

National foreword

This Part of BS 7024, prepared under the direction of the Information Systems Technology Standards Committee, is identical with ISO 7487-2:1985 “*Information processing — Data interchange on 130 mm (5.25 in) flexible disk cartridges using modified frequency modulation recording at 7 958 ftprad, 1.9 tpmm (48 tpi), on both sides — Part 2: Track format A*” published by the International Organization for Standardization (ISO).

In 1989 the European Committee for Standardization (CEN) accepted ISO 7487-2 as European Standard EN 27487-2:1989.

The purpose of this standard is to define those characteristics necessary for successful data interchange using flexible disk cartridges. The information contained is intended as a guide to writing complete specifications for manufacture, purchasing and/or testing. The text of the International Standard does not accord with the recommendations for drafting product specifications given in the ISO Directives, or in BS 0-3, but the BSI Technical Committee considers the text is useful as a guide when cartridges are being described or specified. For this reason this Part of BS 7024 has a different title from the International Standard; it is issued as a British Standard guide and it should only be used as such. It should not be used on its own as a British Standard product specification and, in particular, no claims of compliance with this Part of BS 7024 should be made.

Terminology and conventions. The text of the International Standard has been approved as suitable for publication as a British Standard without deviation. Some terminology and certain conventions are not identical with those used in British Standards; attention is drawn especially to the following.

For metric units the comma has been used as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker.

Wherever the words “part of ISO 7487” and “ISO 7487” appear, they should be read as “Part of BS 7024” and “BS 7024” respectively.
