Contents

Foreword *ii*

1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General requirements	1
5	Dimensions of probe and type-specific connection point	1
6	Marking, colour coding and packaging	1
7	Information to be supplied by the manufacturer	2

List of figures

Figure 1	– Dimensions of probe, nut and O ring	3
Figure 2	– Dimensions of type-specific connection point	6

Summary of pages

This document comprises a front cover, an inside front cover, pages i to ii, pages 1 to 6, an inside back cover and a back cover.

Foreword

Publishing information

This British Standard is published by BSI and came into effect on 31 March 2011. It was prepared by Subcommittee CH/121/6, *Medical gas supply systems*, under the authority of Technical Committee CH/121, *Anaesthetic and respiratory equipment*. A list of organizations represented on these committees can be obtained on request to their secretary.

Relationship with other publications

Terminal units for anaesthetic gas scavenging systems are specified in BS EN ISO 9170-2, which was written with the intention that national standards would be in place to specify the dimensions of the terminal units for high flow gas scavenging systems. Such high flow systems are standard in the UK and the dimensions were previously given in BS 6834 which was withdrawn on publication of BS EN 737-4:1998, and which in turn has been superseded by BS EN ISO 9170-2. This British Standard has been prepared to specify the dimensions of the probes and type-specific connection points for terminal units for these systems.

Presentational conventions

The provisions of this standard are presented in roman (i.e. upright) type. Its requirements are expressed in sentences in which the principal auxiliary verb is "shall".

Commentary, explanation and general informative material is presented in smaller italic type, and does not constitute a normative element.

Contractual and legal considerations

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard cannot confer immunity from legal obligations.
