National foreword

This British Standard has been prepared under the direction of the Electronic Components Standards Committee. It is identical with CENELEC Electronic Components Committee CECC 41101 “Blank detail specification: Preset potentiometers (assessment level S)”.

This standard is a harmonized specification within the CECC system.

Terminology and conventions The text of the CECC specification has been approved as suitable for publication, without deviation, as a British Standard. Some terminology and certain conventions are not identical with those used in British Standards. Attention is especially drawn to the following.

The comma has been used throughout as a decimal marker. In British Standards it is current practice to use a full point on the baseline as the decimal marker.

Cross references The British Standard harmonized with CECC 00100 is BS E9000 “General requirements for electronic components of assessed quality harmonized with the CENELEC Electronic Component Committee System” — Part 1: “Basic rules”.

The following International Standards are referred to in the text and for each there is a corresponding British Standard; these are as listed below:

International Standard	Corresponding British Standard
CECC 41000:1976	BS CECC 41000:1977 <i>Harmonized system of quality assessment for electronic components: Generic specification for potentiometers</i> (Identical)
CECC 41100:1976	BS CECC 41100:1978 <i>Harmonized system of quality assessment for electronic components: Sectional specification: Lead screw actuated and rotary preset potentiometers</i> (Identical)

Scope. This standard lists the ratings, characteristics and inspection requirements which shall be included as mandatory requirements in accordance with BS CECC 41100.

Detail specification layout. In the event of conflict between the requirements of this specification and the provisions of BS E9000 the latter shall take precedence except the front page layout will be in accordance with BS 9000 Circular Letter No. 15 dated August 1977.

A British Standard does not purport to include all the necessary provisions of a contract. Users of British Standards are responsible for their correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

Summary of pages

This document comprises a front cover, an inside front cover, pages i and ii, the CECC title page, page ii, pages 1 to 11 and a back cover.

This standard has been updated (see copyright date) and may have had amendments incorporated. This will be indicated in the amendment table on the inside front cover.

Foreword

The CENELEC Electronic Components Committee (CECC) is composed of those member countries of the European Committee for Electrotechnical Standardization (CENELEC) who wish to take part in a harmonized System for electronic components of assessed quality.

The object of the System is to facilitate international trade by the harmonization of the specifications and quality assessment procedures for electronic components, and by the grant of an internationally recognized Mark, or Certificate, of Conformity. The components produced under the System are thereby accepted by all member countries without further testing.

This document has been formally approved by the CECC, and has been prepared for those countries taking part in the System who wish to issue national harmonized specifications for PRESET POTENTIOMETERS (Assessment level S). It should be read in conjunction with document CECC 00100: Basic Rules (1974).

At the date of printing of this document the member countries of the CECC are Belgium, Denmark, France, Germany, Ireland, Italy, the Netherlands, Norway, Sweden, Switzerland, the United Kingdom, and copies of it can be obtained from the National Committees of the CENELEC in these countries.

Preface

This blank detail specification was prepared by CECC Working Group 4: “Resistors”.

In accordance with the requirements of document CECC 00100 it is based, wherever possible, on the Recommendations of the International Electrotechnical Commission and in particular on IEC Publication 393-1: *Potentiometers. Part 1: Terms and methods of test*.

The text of this blank detail specification was circulated to the CECC for voting in the documents listed below and was ratified by the CECC for printing as a CECC Specification.

Document	Voting date	
CECC (Secretariat) 213	3 April	1974
CECC (Secretariat) 354	28 April	1975
CECC (Secretariat) 436	27 February	1976

Key for page 1

The numbers between square brackets on page 1 correspond to the following indications which should be given:

Identification of the harmonized detail specification

- [1] The name of the National Standards Organization under whose authority the detail specification is drafted
- [2] The CECC Symbol and the number allotted to the national detail specification by the CECC General Secretariat
- [3] The number and issue number of the national generic and sectional specifications
- [4] The national number of the detail specification, date of issue and further information required by the national system, together with any amendment numbers, if issued.

Identification of the potentiometer

- [5] A short description of the type of potentiometer
- [6] Information on typical construction (where applicable) for example: non-wirewound, leadscrew actuated.
- [7] Outline drawing with main dimensions which are of importance for interchangeability and/or reference to the national or international documents for outlines. Alternatively, this drawing may be given in an appendix to the detail specification.
- [8] Application or group of applications covered, or, preferably, the level of quality assessment covered by the blank detail specification.
- [9] Reference data on the most important properties, to allow comparison between the various resistor types.
