

Geotextiles and geotextile-related products — Determination of the long term protection efficiency of geotextiles in contact with geosynthetic barriers

The European Standard EN 13719:2002 has the status of a
British Standard

ICS 59.080.70; 91.100.50

National foreword

This British Standard is the official English language version of EN 13719:2002.

The UK participation in its preparation was entrusted to Technical Committee B/553, Geosynthetics which has the responsibility to:

- aid enquirers to understand the text;
- present to the responsible international/European committee any enquiries on the interpretation, or proposals for change, and keep the UK interests informed;
- monitor related international and European developments and promulgate them in the UK.

A list of organizations represented on this committee can be obtained on request to its secretary.

Cross-references

The British Standards which implement international or European publications referred to in this document may be found in the *BSI Catalogue* under the section entitled “International Standards Correspondence Index”, or by using the “Search” facility of the *BSI Electronic Catalogue* or of British Standards Online.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

Compliance with a British Standard does not of itself confer immunity from legal obligations.

This British Standard, having been prepared under the direction of the Building and Civil Engineering Sector Policy and Strategy Committee, was published under the authority of the Standards Policy and Strategy Committee on 15 October 2002

Summary of pages

This document comprises a front cover, an inside front cover, the EN title page, pages 2 to 14, an inside back cover and a back cover.

English version

Geotextiles and geotextile-related products - Determination of
the long term protection efficiency of geotextiles in contact with
geosynthetic barriers

Géotextiles et produits apparentés - Détermination de
l'efficacité de protection à long terme des géotextiles en
contact avec les barrières géosynthétiques

Geotextilien und geotextilverwandte Produkte -
Bestimmung der langfristigen Schutzwirksamkeit von
Geotextilien im Kontakt mit geosynthetischen
Dichtungsbahnen

This European Standard was approved by CEN on 28 July 2002.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and United Kingdom.

Foreword

This document EN 13719:2002 has been prepared by CEN/TC 189 "Geosynthetics", the secretariat of which is held by IBN.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by March 2003, and conflicting national standards shall be withdrawn at the latest by March 2003.

Annex A is normative. Annex B is informative.

According to the CEN/CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Czech Republic, Denmark, Finland, France, Germany, Greece, Iceland, Ireland, Italy, Luxembourg, Malta, Netherlands, Norway, Portugal, Spain, Sweden, Switzerland and the United Kingdom.

1 Scope

This European Standard is an index test used to determine the efficiency with which a geotextile or geotextile-related product will protect a geosynthetic barrier or other contact surface against the mechanical long term effects of static point loads.

The test is performed on the geotextile or geotextile-related product in isolation. It measures the strains experienced by a geotextile or geotextile-related product in contact with a deformable pad.

NOTE Other properties relevant to the protection of geosynthetic barriers against differing actions are covered by other standards, e.g. dynamic perforation is covered in EN 918.

A related performance test simulating specific site conditions is described in annex B.

2 Normative references

This European Standard incorporates by dated or undated reference, provisions from other publications. These normative references are cited at the appropriate places in the text, and the publications are listed hereafter. For dated references, subsequent amendments to or revisions of any of these publications apply to this European Standard only when incorporated in it by amendment or revision. For undated references the latest edition of the publication referred to applies (including amendments).

EN 963	<i>Geotextiles and geotextile-related products - Sampling and preparation of test specimens.</i>
EN ISO 10320	<i>Geotextiles and geotextile-related products - Identification on site (ISO 10320:1999).</i>
EN 12588	<i>Lead and lead alloys - Rolled lead sheet for building purposes.</i>
ISO 554	<i>Standard atmospheres for conditioning and/or testing – Specifications.</i>
ISO 7619	<i>Rubber - Determination of indentation hardness by means of pocket hardness meters.</i>

3 Terms and definitions

For the purposes of this European Standard, the following terms and definitions apply.

3.1

local strain

difference between the deformed length (l_d) of a straight line between two points on either side of a deformation and the undeformed length (l_u) between the same two points divided by the undeformed length (see Figure 1)
