National foreword

This British Standard is the UK implementation of EN IEC 60695-7-2:2021. It is identical to IEC 60695-7-2:2021. It supersedes BS EN 60695-7-2:2011, which is withdrawn.

The UK participation in its preparation was entrusted to Technical Committee GEL/89, Fire hazard testing.

A list of organizations represented on this committee can be obtained on request to its committee manager.

Contractual and legal considerations

This publication has been prepared in good faith, however no representation, warranty, assurance or undertaking (express or implied) is or will be made, and no responsibility or liability is or will be accepted by BSI in relation to the adequacy, accuracy, completeness or reasonableness of this publication. All and any such responsibility and liability is expressly disclaimed to the full extent permitted by the law.

This publication is provided as is, and is to be used at the recipient's own risk.

The recipient is advised to consider seeking professional guidance with respect to its use of this publication.

This publication is not intended to constitute a contract. Users are responsible for its correct application.

This European Standard was approved by CENELEC on 2021-12-02. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Croatia, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Republic of North Macedonia, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

European foreword

The text of document 89/1489/CDV, future edition 2 of IEC 60695-7-2, prepared by IEC/TC 89 “Fire hazard testing” was submitted to the IEC-CENELEC parallel vote and approved by CENELEC as EN IEC 60695-7-2:2021.

The following dates are fixed:

- latest date by which the document has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2022–09–02
- latest date by which the national standards conflicting with the document have to be withdrawn (dow) 2024–12–02

This document supersedes EN 60695-7-2:2011 and all of its amendments and corrigenda (if any).

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CENELEC shall not be held responsible for identifying any or all such patent rights.

Any feedback and questions on this document should be directed to the users’ national committee. A complete listing of these bodies can be found on the CENELEC website.

Endorsement notice

The text of the International Standard IEC 60695-7-2:2021 was approved by CENELEC as a European Standard without any modification.

In the official version, for Bibliography, the following notes have to be added for the standards indicated:

IEC 60695-1-11 NOTE Harmonized as EN 60695-1-11

IEC 60695-1-12 NOTE Harmonized as EN IEC 60695-1-12

IEC 60695-4 NOTE Harmonized as EN IEC 60695-4

ISO 5659-2 NOTE Harmonized as EN ISO 5659-2

IEC 60695-6-2 NOTE Harmonized as EN IEC 60695-6-2

INTERNATIONAL ELECTROTECHNICAL COMMISSION

_____

FIRE HAZARD TESTING –

Part 7-2: Toxicity of fire effluent – Summary and relevance of test methods

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) Attention is drawn to the possibility that some of the elements of this IEC Publication may be the subject of patent rights. IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 60695-7-2 has been prepared by IEC technical committee 89: Fire hazard testing.

This second edition cancels and replaces the first edition published in 2011. This edition constitutes a technical revision.

The main changes with respect to the previous edition are listed below:

– New text in the introduction;
– New text in the scope;
– Clause 2 has been updated;
– Many terms and definitions in Clause 3 reproduced from ISO 13943 have been deleted. Other terms and definitions have been added.
– New text in Subclauses 4.3 and 4.4;
– New text in Subclause 6.1;

Documents
Document Sharing Hub

Full document details: BS EN IEC 60695-7-2:2021

– References to IEC 60695-7-50 and -51 (now withdrawn) have been removed;
– Reference to DEF STAN 07-247 has been added;
– Details of ISO/TS 19021 have been added;
– Details of EN 17084 have been added;
– New text added concerning ISO/TS 19700;
– New text added concerning the IMO FTP toxicity test;
– New Subclause 7.1 has been added;
– The Annex in Edition1 has been replaced by new Clause 8;
– The bibliography has been updated.

The text of this International Standard is based on the following documents:

Draft	Report on voting
89/1489/CDV	89/1508/RVC

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

It has the status of a basic safety publication in accordance with IEC Guide 104.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/standardsdev/publications.

A list of all the parts in the 60695 series, under the general title *Fire hazard testing*, can be found on the IEC website.

IEC 60695-7 consists of the following parts:

Part 7-1: *Toxicity of fire effluent – General guidance*
Part 7-2: *Toxicity of fire effluent – Summary and relevance of test methods*
Part 7-3: *Toxicity of fire effluent – Use and interpretation of test results*

In this document the following print types are used:

– Words *in italics* in the text are defined in Clause 3.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

- reconfirmed,
- withdrawn,
- replaced by a revised edition, or
- amended.

Full document details: BS EN IEC 60695-7-2:2021

INTRODUCTION

In the design of an electrotechnical product, the risk of fire and the potential hazards associated with fire need to be considered. In this respect the objective of component, circuit and equipment design, as well as the choice of materials, is to reduce the risk of fire to a tolerable level even in the event of reasonably foreseeable (mis)use, malfunction or failure.

IEC 60695-1-10, IEC 60695-1-11 [1][1], and IEC 60695-1-12 [2] provide guidance on how this is to be accomplished.

Fires involving electrotechnical products can also be initiated from external non-electrical sources. Considerations of this nature are dealt with in an overall fire hazard assessment.

The aim of the IEC 60695 series of standards is to save lives and property by reducing the number of fires or reducing the consequences of the fire. This can be accomplished by:

- trying to prevent ignition caused by an electrically energised component part and, in the event of ignition, to confine any resulting fire within the bounds of the enclosure of the electrotechnical product;
- trying to minimise flame spread beyond the product's enclosure and to minimise the harmful effects of fire effluents including heat, smoke, and toxic or corrosive combustion products.

Electrotechnical products, primarily as the objects of a fire, may contribute to the fire hazard due to the release of toxic effluent, which may be a significant contributing factor to the overall fire hazard.

The IEC 60695-7 series provides guidance to IEC product committees on the adoption and implementation of the recommendations of ISO for the minimization of toxic hazard from fires involving electrotechnical products.This part of IEC 60695-7 describes fire effluent toxicity test methods in common use to assess electrotechnical products or materials used in electrotechnical products.

IEC product committees incorporating requirements for the assessment of toxic hazard from fire in product standards should note that *toxic potency* and other measurements of toxicity which are described in this part of IEC 60695 should not be used directly in product specifications. Data from *toxic potency* test methods should only be used as part of a toxic hazard assessment, in conjunction with other product-based reaction to fire data such as mass loss rate.

[1] Numbers in square brackets refer to the bibliography.

FIRE HAZARD TESTING –

Part 7-2: Toxicity of fire effluent – Summary and relevance of test methods

1 Scope

This part of IEC 60695-7 gives a brief summary of the test methods that are in common use in the assessment of the toxicity of fire effluent. It includes special observations on their relevance to real fire scenarios and gives recommendations on their use.

It advises which tests provide *toxic potency* data that are relevant to real fire scenarios, and which are suitable for use in fire hazard assessment and fire safety engineering.

The list of test methods is not to be considered exhaustive.

This summary cannot be used in place of published standards which are the only valid reference documents.

This basic safety publication is intended for use by technical committees in the preparation of standards in accordance with the principles laid down in IEC Guide 104 and ISO/IEC Guide 51.

One of the responsibilities of a technical committee is, wherever applicable, to make use of basic safety publications in the preparation of its publications. The requirements, test methods or test conditions of this basic safety publication will not apply unless specifically referred to or included in the relevant publications.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. 3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 13943:2017, some of which are reproduced below for the user's convenience, and the following apply.

ISO and IEC maintain terminological databases for use in standardization at the following addresses:

- IEC Electropedia: available at http://www.electropedia.org/
- ISO Online browsing platform: available at http://www.iso.org/obp

3.1
acute toxicity
toxicity that causes rapidly occurring toxic effects

Note 1 to entry: Compare with the term *toxic potency* (3.16).

[ISO 13943:2017, definition 3.8]

3.2
asphyxiant
toxicant (3.17) that causes hypoxia, which can result in central nervous system depression or cardiovascular effects

Note 1 to entry: Loss of consciousness and ultimately death may occur.

[ISO 13943:2017, definition 3.23]

3.3
concentration
mass of a dispersed or dissolved material in a given volume

Note 1 to entry: For a fire effluent the typical unit is g· m^{-3}.

Note 2 to entry: For toxic gas, concentration is usually expressed as a *volume fraction* (3.18) at T = 298 K and P = 1 atm, with typical units of μL/L (= cm^3/m^3 = 10^{-6}).

Note 3 to entry: The concentration of a gas at a temperature, T, and a pressure, P, can be calculated from its volume fraction (assuming ideal gas behaviour) by multiplying the volume fraction by the density of the gas at that temperature and pressure.

Note 4 to entry: Pascal (Pa) is the SI unit for pressure; however, atmosphere (atm) is typically used in this context, where 1 atm = 101,3 kPa.

[ISO 13943:2017, definition 3.62]

Documents
Document Sharing Hub
Full document details: BS EN IEC 60695-7-2:2021

3.4
effective concentration 50
EC_{50}
concentration (3.3) of a toxic gas or fire effluent, statistically calculated from concentration-response data, that causes a specified effect in 50 % of a population of a given species within a specified exposure time and post-exposure time

Note 1 to entry: Compare with the term IC_{50} (ISO 13943:2017, 3.211).

Note 2 to entry: For fire effluent, the typical unit is g × m^{-3}.

Note 3 to entry: For toxic gas, the typical unit is μL/L (T = 298 K and P = 1 atm); see *volume fraction* (3.18).

Note 4 to entry: The observed effect is usually a behavioural response, *incapacitation* (3.8), or death. The EC_{50} for incapacitation is termed the IC_{50}. The EC_{50} for lethality is termed the LC_{50} (3.11).

3.5
exposure dose
measure of the maximum amount of a toxic gas or fire effluent that is available for inhalation, calculated by integration of the area under a *concentration*-time curve

Note 1 to entry: For fire effluent, the typical unit is g × min × m^{-3}.

Note 2 to entry: For toxic gas, the typical unit is μL × min × L^{-1} (T = 298 K and P = 1 atm); see *volume fraction* (3.18).

[ISO 13943:2017, definition 3.107]

3.6
fractional effective concentration
FEC
ratio of the *concentration* (3.3) of an *irritant* (3.9) to that concentration expected to produce a specified effect on an exposed subject of average susceptibility

Note 1 to entry: Compare with the term F factor (ISO 13943:2017, 3.112).

Note 2 to entry: As a concept, FEC may refer to any effect, including *incapacitation* (3.8), lethality or other endpoints.

Note 3 to entry: When not used with reference to a specific irritant, the term FEC represents the summation of FEC values for all irritants in a fire-generated atmosphere.

Note 4 to entry: The FEC is dimensionless.

[ISO 13943:2017, definition 3.187]

3.7
fractional effective dose
FED
ratio of the *exposure dose* (3.5) for an *asphyxiant* (3.2) to that exposure dose of the asphyxiant expected to produce a specified effect on an exposed subject of average susceptibility

Note 1 to entry: As a concept, FED may refer to any effect, including *incapacitation* (3.8), lethality or other endpoints.

Note 2 to entry: When not used with reference to a specific asphyxiant, the term FED represents the summation of FED values for all asphyxiants in a combustion atmosphere.

Note 3 to entry: The FED is dimensionless.

[ISO 13943:2017, definition 3.188]

3.8
incapacitation
state of physical inability to accomplish a specific task

Note 1 to entry: An example of a specific task is to accomplish escape from a fire.

[ISO 13943:2017, definition 3.225]

3.9
irritant, noun
<sensory/upper respiratory> gas or aerosol that stimulates nerve receptors in the eyes, nose, mouth, throat and respiratory tract, causing varying degrees of discomfort and pain with the initiation of numerous physiological defence responses

Note 1 to entry: Physiological defence responses include reflex eye closure, tear production, coughing, and bronchoconstriction.

[ISO 13943:2017, definition 3.237]

3.10
irritant, noun
<pulmonary> gas or aerosol that stimulates nerve receptors in the lower respiratory tract, which may result in breathing discomfort

Note 1 to entry: Examples of breathing discomfort are dyspnoea and an increase in respiratory rate. In severe cases, pneumonitis or pulmonary oedema (which may be fatal) may occur some hours after exposure.

[ISO 13943:2017, definition 3.238]

3.11
lethal concentration 50
LC_{50}
concentration (3.3) of a toxic gas or fire effluent, statistically calculated from concentration-response data, that causes death of 50 % of a population of a given species within a specified exposure time and post-exposure time

Note 1 to entry: Compare with the term *effective concentration 50* (3.4).

Note 2 to entry: For fire effluent, the typical unit is g × m^{-3}.

Note 3 to entry: For toxic gas, the typical unit is µL/L (T = 25 °C and P = 1 atm; see *volume fraction* (3.18).

[ISO 13943:2017, definition 3.241]

3.12
lethal exposure dose 50
LCt_{50}
product of LC_{50} (3.11) and the exposure time over which it was determined

Note 1 to entry: Compare with the terms *concentration* (3.3), *effective exposure dose 50* (ISO 13943:2017, 3.87), *exposure dose* (3.5) and *lethal exposure time 50* (ISO 13943:2017, 3.243).

Note 2 to entry: LCt_{50} is a measure of *lethal toxic potency* (3.13).

Note 3 to entry: For fire effluent, the typical unit is g·min·m^{-3}.

Note 4 to entry: For toxic gas, the typical unit is µL·min·L^{-1}) (T = 25 °C and P = 1 atm); see *volume fraction* (3.18).

[ISO 13943:2017, definition 3.242]

3.13
lethal toxic potency
toxic potency (3.16) where the specific toxic effect is death
